

# Unsupervised and reinforcement learning

## HIV 2015/16

The final grade is composed of two mini-projects and one written exam.

The two mini-projects together count 1/3 of the final grade.

The final exam counts 2/3 of the final grade.

In the written exam, a total of 100 points could be achieved.

For each mini project a total of 30 points could be achieved.

The total number of points for the course is given by

$$P = \frac{1}{3} \left( \frac{1}{2} m_1 \frac{100}{30} + \frac{1}{2} m_2 \frac{100}{30} \right) + \frac{2}{3} Ex$$

The grade is computed by the formula  $1 + P/100 * 5$ ,  
rounded to the closest half note.
