

CS-411: Digital Education & Learning Analytics

Chapter 10: Eye-tracking

Today

- Learn about eye-tracking
- Hands (eyes) on eye-tracker

Eye-tracker: then

Fig. 11. The apparatus used in recording eye movements.

The first eye-tracking study

The first eye-tracking study

Free examination.

1

2

Estimate material circumstances of the family

3

Give the ages of the people.

4

Surmise what the family had been doing before the arrival of the unexpected visitor.

5

Remember the clothes worn by the people.

6

Remember positions of people and objects in the room.

7

Estimate how long the visitor had been away from the family.

3 min. recordings of the same subject

Eye-trackers: now

How does an eye-tracker work?

Tobii 1750

Raw Data

Timestamp [ms]	Category	Pupil size R [mm]	Pupil size L [mm]	Point of regard X	Point of regard Y	...
87542.5	Blink	3	2.9	936.3	691.7	
87575.7	Blink	3	2.8	908.6	639.5	
87609.2	Visual Intake	3	2.9	873.7	613.7	
87642.5	Visual Intake	3	2.9	851.3	608.9	
87675.8	Visual Intake	3	3	828.5	603.1	
87709.2	Visual Intake	3	3	809.1	613.9	
87742.3	Visual Intake	3.1	3	794.1	618.1	
87775.6	Visual Intake	3.1	3.1	783.7	627.1	
87808.8	Visual Intake	3.2	3.1	771.4	633.7	
87842.1	Saccade	3.1	3.2	769.3	651.5	
87875.3	Saccade	3.2	3.2	767.7	671.3	
87908.6	Saccade	3.2	3.2	764	679.8	
87941.8	Visual Intake	3.2	3.2	759	686.1	
87975.3	Visual Intake	3.2	3.2	758.9	690.9	
...	...	...	...	...	...	...

Fixations and Saccades

Fixations: when the eyes rest momentarily on a small part of screen, 120 - 1000 ms

Saccades: when eyes jump rapidly from one part of the screen to another, 40 - 120 ms

Accuracy and Precision

Accuracy: average difference between real position of the stimuli and the measured position of the gaze.

Precision: ability of the eye-tracker to reproduce the same gaze measurement (variance)

Poor accuracy
poor precision

Poor accuracy
good precision

good accuracy
poor precision

Good accuracy
Good precision

“Eye-mind” Hypothesis

What I see is what I process

Free examination.

Applications

1. Marketing: what attracts our attention?
2. Security: where are we paying attention?
3. Research: education, cognition, perception...
4. Groupware: quality of interaction.

1. Marketing

Visual Attention Pattern

Heatmaps are used in eye tracking analysis to visualize the most popular areas for one or more persons in a simple and intuitive way. The most colorful areas indicates what is most interesting.

Least attention Most attention

1. Marketing

2. Security

Conscious driving P3

Driving subconscious P11

3. Research

1. Expert versus novice
2. Task based performance
3. Programming
4. Massive Open Online Courses (MOOCs)

3.1 Expert versus Novice

3.1 Expert versus Novice

3.2 Task based performance

3.2 Task based performance

Solvers

Non-solvers

3.3 Programming

```
public static int goolbaka ( int vv )  
{  
    int c = 0 ;  
    while ( vv >= 0 )  
    {  
        vv /= 10;  
        c ++ ;  
    }  
    return c ;  
}
```

3.3 Programming

```
public static int goolbaka ( int vv )
{
    int c = 0 ;
    while ( vv >= 0 )
    {
        vv /= 10;
        c ++ ;
    }
    return c ;
}
```

Good student

Poor student

```
public static int goolbaka ( int vv )
{
    int c = 0 ;
    while ( vv >= 0 )
    {
        vv /= 10;
        c ++ ;
    }
    return c ;
}
```

3.4 MOOCs

The substitution model

This scheme of expression evaluation is called the *substitution model*.

The idea underlying this model is that all evaluation does is *reduce an expression to a value*.

It can be applied to all expressions, as long as they have no side effects.

The substitution model is formalized in the λ -calculus, which gives a foundation for functional programming.

It can be applied to all expressions, as long as they have no side effects.

The substitution model is formalized in the λ -calculus, which gives a foundation for functional programming.

4. Groupware

1. Gaze-dialogue coupling
2. Dual eye-tracking

4.1 Gaze-dialogue Coupling

- Eye-voice span: time difference between what I see and what I say
- Voice-eye span: time difference between what you say and what I see
- Eye-eye span: time difference between what you see and what I see

4.1 Gaze-dialogue Coupling

Eye-voice span

Griffin, Z. M., and Bock, K. (2000). "What the eyes say about speaking."

4.1 Gaze-dialogue Coupling

Voice-eye span

Allopenna, P. D., et. al., (1998). "Tracking the Time Course of Spoken Word Recognition Using Eye Movements: Evidence for Continuous Mapping Models"

4.1 Gaze-dialogue Coupling

Eye-eye span

Dale, R. et. al., (2007), "Art of conversation is coordination"

4.1 Gaze-dialogue Coupling

Gaze cross-recurrence

4.1 Gaze-dialogue Coupling

Gaze cross-recurrence

4.1 Gaze-dialogue Coupling

Gaze cross-recurrence

4.1 Gaze-dialogue Coupling

Gaze cross-recurrence

4.1 Gaze-dialogue Coupling

Gaze cross-recurrence

4.2 Dual eye-tracking

One task to complete.

Two synchronised eye-trackers.

Synchronised screen: actions, viewports...

Peers can not see each other but can talk.

4.2 Dual eye-tracking

Example: pair-programming

```
private boolean checkForSum (int p, int i1, int i2, int i3) {  
    return (playersNumbers [p].get (i1) + playersNumbers [p].get (i2) + playersNumbers [p].get (i3)) =  
    }  
  
private int checkForWinner () {  
    for (int p = 0; p < 2; p++) {  
        for (int i1 = 0; i1 < playersNumbers [p].size (); i1++) {  
            for (int i2 = i1 + 1; i2 < playersNumbers [p].size (); i2++) {  
                for (int i3 = i2 + 1; i3 < playersNumbers [p].size (); i3++) {  
                    if (checkForSum (p, i1, i2, i3))  
                        return p + 1;  
                }  
            }  
        }  
    }  
    return 0;  
}
```

Good collaboration quality

```
private boolean checkForSum (int p, int i1, int i2, int i3) {  
    return (playersNumbers [p].get (i1) + playersNumbers [p].get (i2) + playersNumbers [p].get (i3)) =  
    }  
  
private int checkForWinner () {  
    for (int p = 0; p < 2; p++) {  
        for (int i1 = 0; i1 < playersNumbers [p].size (); i1++) {  
            for (int i2 = i1 + 1; i2 < playersNumbers [p].size (); i2++) {  
                for (int i3 = i2 + 1; i3 < playersNumbers [p].size (); i3++) {  
                    if (checkForSum (p, i1, i2, i3))  
                        return p + 1;  
                }  
            }  
        }  
    }  
    return 0;  
}
```

Poor collaboration quality

4.2 Dual eye-tracking

Example: collaborative visual search

Q	Q	Q	Q	Q	Q
Q	Q	Q	Q	Q	Q
Q	Q	Q	O	Q	Q
Q	Q	Q	Q	Q	Q
Q	Q	Q	Q	Q	Q

4.2 Dual eye-tracking

Example: collaborative visual search

Good collaboration quality
Low cross-recurrence

Poor collaboration quality
High cross-recurrence

Eye-tracking and Learning Analytics

Learning Analytics: capture, compare, evaluate, intervene

Eye-tracking and Learning Analytics

Eye-tracking and Learning Analytics

1. Gaze-awareness: where am I looking?
2. Gaze-contingency: where is the speaker looking?

1. Gaze Awareness

With-me-ness

1. Perceptual with-me-ness: how much do you follow the teacher's explicit gestures?
2. Conceptual with-me-ness: how much do you follow the teacher's dialogues?

1. Gaze Awareness

Perceptual With-me-ness

Parameter and Return Types

Function parameters come with their type, which is given after a colon

```
def power(x: Double, y: Int): Double = ...
```

If a return type is given, it follows the parameter list.

Primitive types are as in Java, but are written capitalized, e.g:

Int	32-bit integers
Double	64-bit floating point numbers
Boolean	boolean values true and false

1. Gaze Awareness

Perceptual With-me-ness

Parameter and Return Types

Function parameters come with their type, which is given after a colon

Parameter and Return Types

Function parameters come with their type, which is given after a colon

```
def power(x: Double, y: Int): Double = ...
```

If a return type is given, it follows the parameter list.

Primitive types are as in Java, but are written capitalized, e.g:

Int	32-bit integers
Double	64-bit floating point numbers
Boolean	boolean values true and false

Revisits

1. Gaze Awareness

Conceptual With-me-ness

Time t = 0

```
for ( int  i = 0 ; i <  n ; i++)  
{  
    sum += array [i];  
}
```

Teacher: the iterator loops

Time t = 1

```
for ( int i = 0 ; i < n ; i++)  
{  
    sum +=  array [i];  
}
```

Teacher: over the array

Time t = 2

```
for ( int i = 0 ; i < n ; i++)  
{  
     += array [i];  
}
```

Teacher: updating the sum

1. Gaze Awareness

With-me-ness

- Perceptual with-me-ness is correlated to learning gain.
- Conceptual with-me-ness is correlated to learning gain.
- What happens when we give students the feedback about their with-me-ness?

1. Gaze Awareness

With-me-ness

1. Gaze Awareness

With-me-ness

2. Gaze Contingency

2. Gaze Contingency

2. Gaze Contingency

Number of pauses per minute

2. Gaze Contingency

Proportion of paused time

2. Gaze Contingency

Number of seek-backs per minute

2. Gaze Contingency

- When the teacher's gaze is displayed the video-watching behaviour reflects low perceived difficulty.
- Is gaze better than a pen pointer?

2. Gaze Contingency
