How do people learn ?

Chapter 3: Skinner - Bloom

- by incremental mastery

Chapter 5: Vygotsky

- by verbal elaboration

Chapter 6: Piaget

- by exploration, trial and error

Class Plane

Team Plane

Individual Plane

$$1 + 1 > 2$$

Is learning in teams
more effective
than learning alone ?

Question 1: Is Collaborative Learning Effective ?

	Learning Gains		
Meta-analyses: collaborative versus individual	>	=	<
Slavin, 1983.	26	14	1
Johnson & Johnson, 1989	829	645	109

Thanks to Fabrizio Butera

A decision maker could conclude that the probability that team learning is effective is high enough to use it.

A scientist would instead conclude that team learning is not effective per se, but depends on the conditions... see next slide

Teams can be a pain!

Photo (c) Juerg Kaufmann@Image.com

Pitfalls in Teamwork

- 'GroupThink': pressure to consensus leads to suboptimal answers
- In education, as soon as they agree, learners return the solution to the teacher without checking if it is the best one

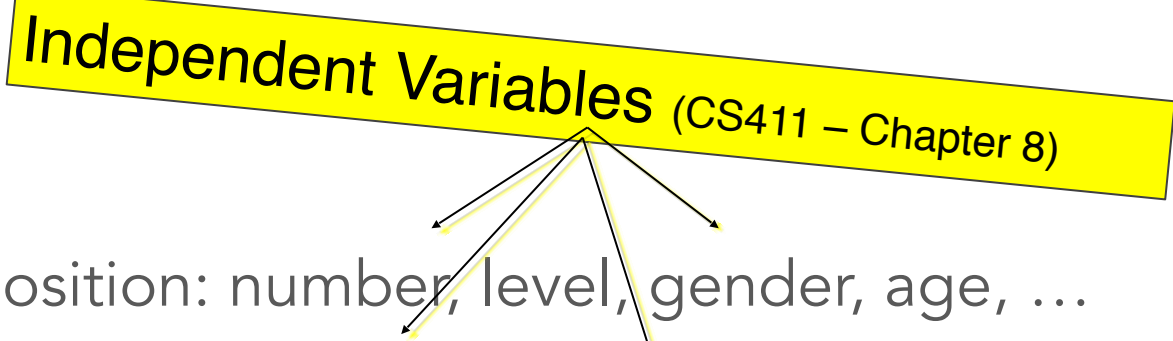

https://www.youtube.com/watch?v=glUUmsBb_58

Pitfalls in Teamwork

- 'GroupThink': as soon as they agree, learners return the solution to the teacher without checking if it is the optimal solution
- Free-rider / Social Loafing: some teams members let the others do the work
- Domination: some team members dominate verbal interactions; contributions from some members are rejected or not taken into consideration
- Emotional (vs epistemic) conflict

Question 2: **When** is collaborative learning effective ?

Independent Variables (CS411 – Chapter 8)

Factors:

- **Group** composition: number, level, gender, age, ...
- **Task** features: verbalizable, open, ...
- **Medium**: face-to-face, synchro/not, text/audio/video, ...
- **Context**: school/work

The effects of collaborative depends upon so many variables (plus their interaction effects) that it is impossible to predict that a given teamwork in a specific context will be effective

Question 3: Which **interactions** make collaborative learning effective ?

1. Elaborated **explanations**
2. Conflict resolution, **Argumentation** / Négociation
3. Mutual **Regulation**

Collaborative learning occurs when team members engage into the 'productive interactions' listed above.

These interactions are summarized as “the effort” that team members engaged to reach and maintain a **shared understanding** of the task.

Collaborative learning occurs when team members engage into

rich verbal interactions

These interactions are summarized as “**the effort**” that team members engaged to reach and maintain a **shared understanding** of the task.

Question 4: Which **design**
increases the probability that teams
produce rich verbal **interactions**
(that make collaborative learning effective) ?

Pedagogical scenario for increasing the probability that interactions X,Y,Z occur in teamwork.

Last week lesson:

~~“Please discuss about the pros and cons of collaborative learning and the role of computers !”~~

Orchestration Graph

Collaboration Script: Pedagogical scenario for increasing the probability that interactions X,Y,Z occur in teamwork.

CACL Script 2

"Jigsaw"

- Task: How to prevent a large earthquake ?
- Roles:
 - Maire of San Francisco 
 - Insurance agent 
 - Security officer 
 - Geologist 
- Context: Previous experiments in Denver

In the Jigsaw script, every team member receives a subset of the information necessary to solve the task. This task cannot be solved without the contribution of each individual.

CACL Script 2

Phase "Experts"

Grid

Place the concepts below on the grid to show the link between two concepts to define their similitude or difference with the link. You might change the concepts place to define other relations.

CSCAL Script 3

"Democracy" vs "Election"

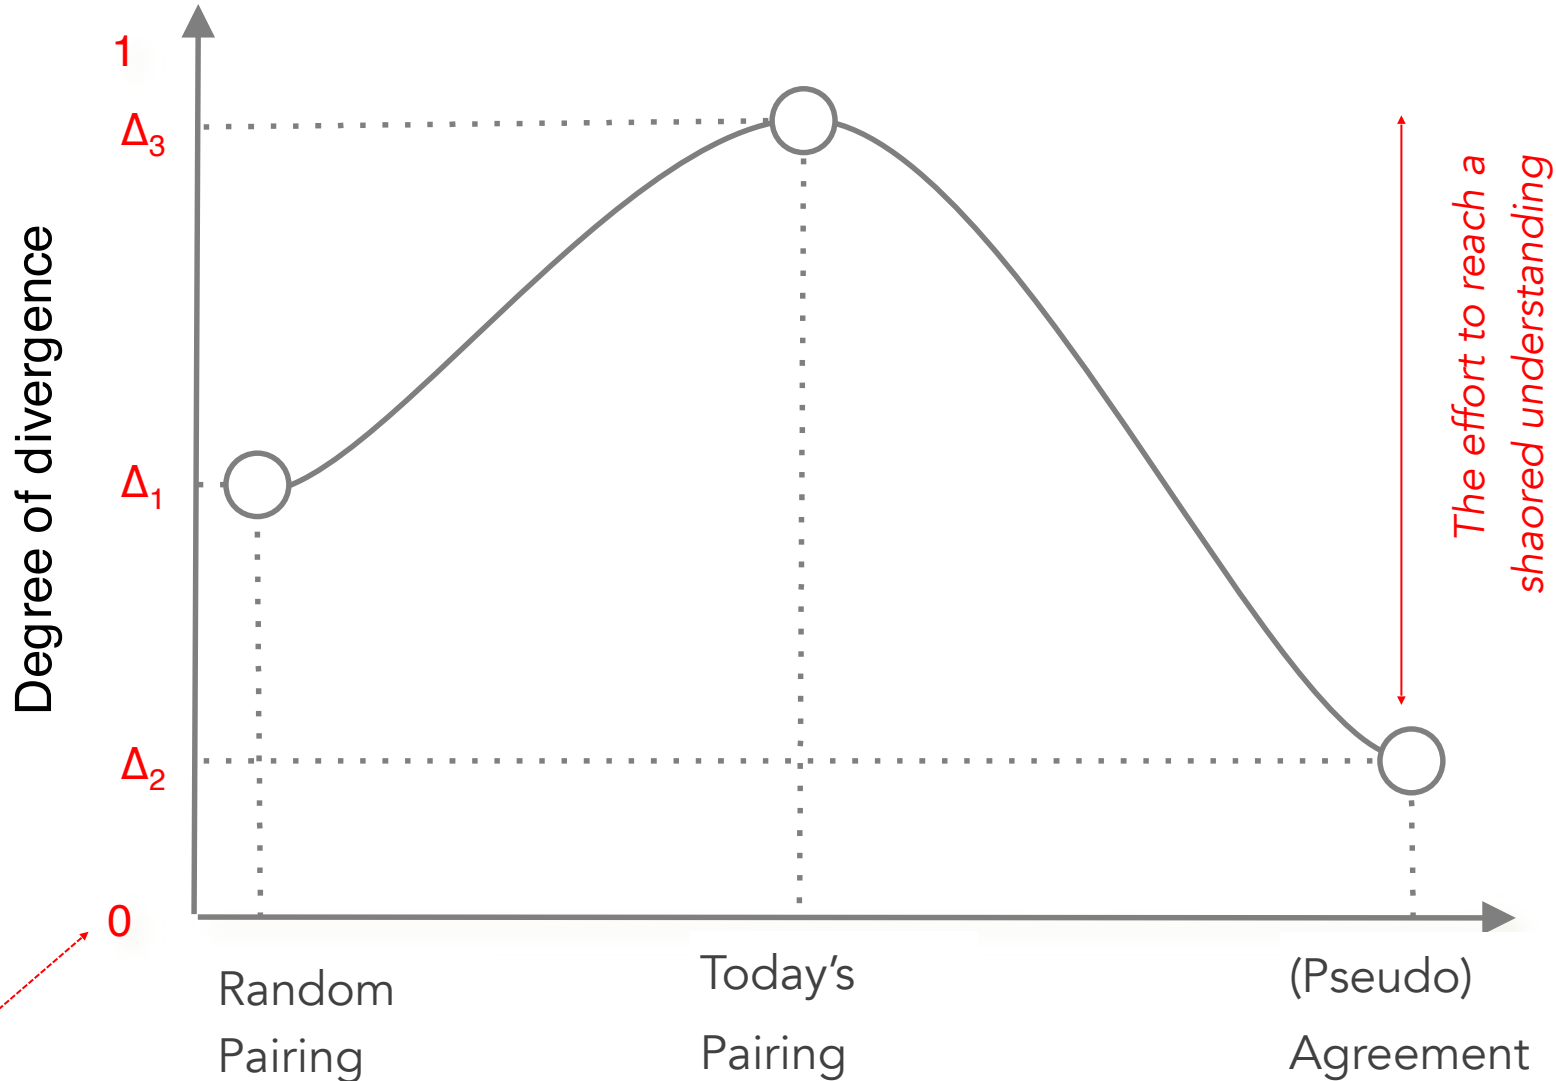

Relationship:

Comments: Democracy is a form of government in which it is recognized that ultimate authority belongs to the people, who have the right to participate in the decision-making process called elections, to appoint and dismiss their rulers.

Socio-Cultural
Theories

→ CSCCL

Socio-Cultural Theories

Collaboration

"Every function in the child's cultural development appears twice: first, on the social level, and later, on the individual level; first, between people (interpsychological) and then inside the child (intrapsychological). This applies equally to voluntary attention, to logical memory, and to the formation of concepts. All the higher functions originate as actual relationships between individuals. »

Lev Vygotski
(1896-1934)

No

10:30

Is this North-East?

What time is it ?

Not that way

Side ? Time ? ok

Internalisation

Social Interaction

Internalisation

Private speech (Vygostky)

Egocentric speech (Piaget)

Thinking

We internalise social interaction because
thinking is a dialogue with oneself .

What I do in interaction with
a more knowledgeable peer

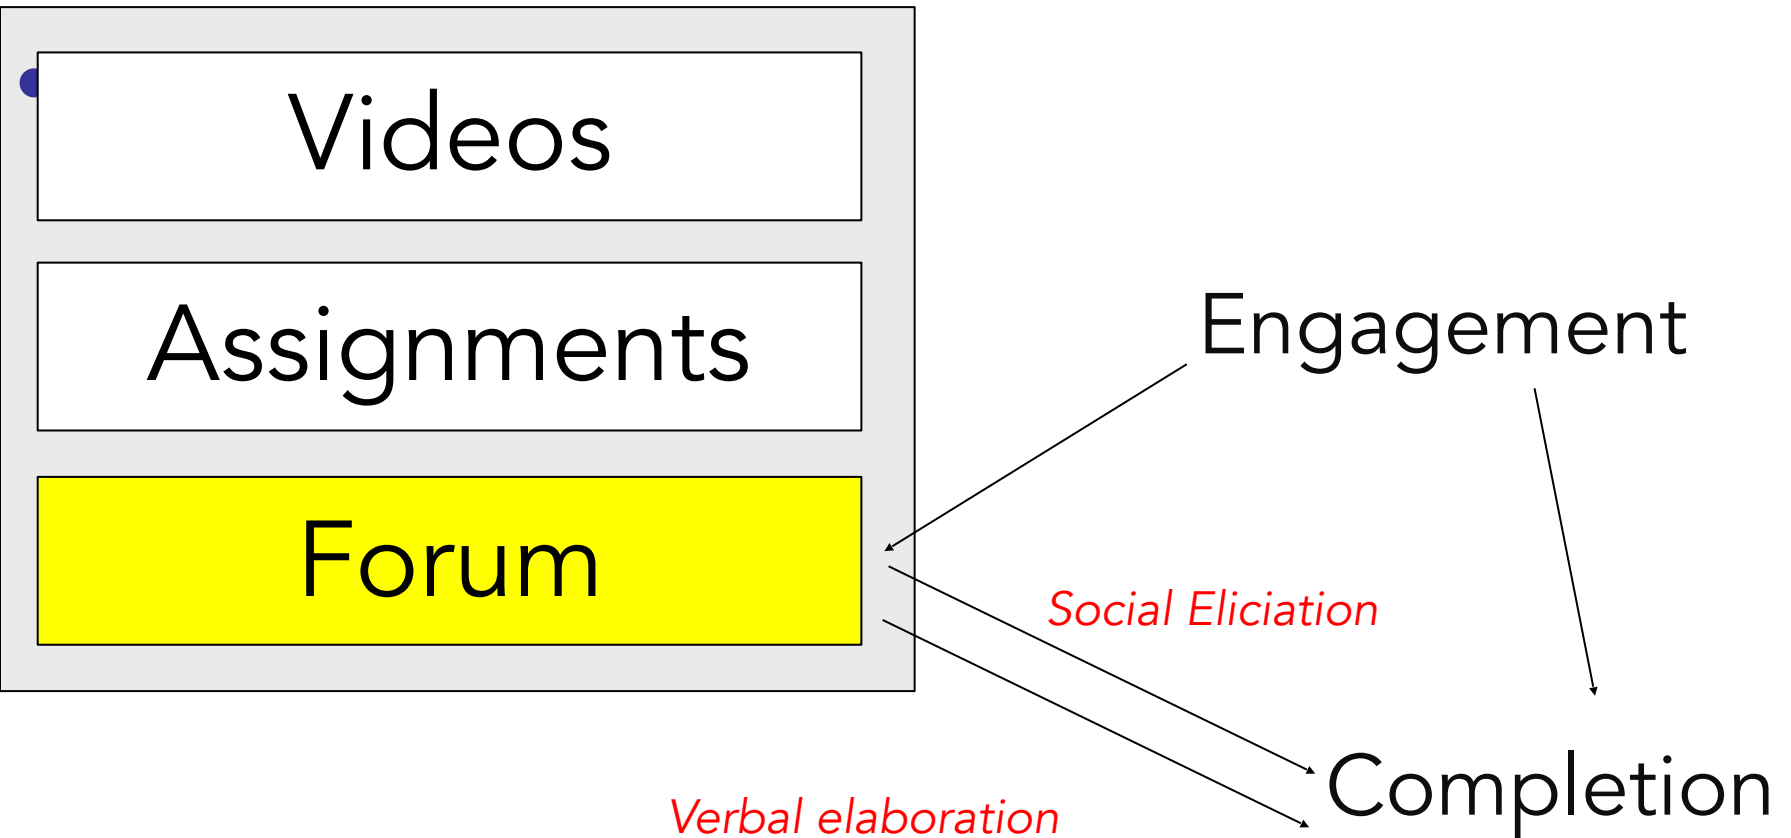

What I can do alone

Internalisation

Zone of Proximal
Development

The zone of proximal development (ZPD) has been defined as "the distance between the actual developmental level as determined by independent problem solving and the level of potential development as determined through problem solving under adult guidance, or in collaboration with more capable peers" (Vygotsky, 1978, p. 86).

Social interactions in MOOC ?

Social facilitation is the tendency for people to perform differently when in the presence of others than when alone (Wikipedai)

Social interactions in MOOCs ?

MeetUPs

The screenshot shows a Meetup page for the "Stanford Machine Learning Course CS 229" in Paris, France. The page is in French and features a red header with the course name. Below the header, there are navigation tabs for "Accueil", "Membres", "Photos", "Discussions", and "Plus", along with a "Rejoindre" button. The main content area includes a description of the course, a "Rejoindre" button, and a section for "Mes amis déjà membres" with a Facebook login option. There are also sections for "Meetups récents" and "Actualités".

Online Learning Communities

Learning a culture by participation

The social structure of a knowledge community is not flat

(Dutch policemen in charge of drugs)

Social Network Analysis

Summary of chapter 5

1. Collaborative learning is often effective, but not systematically.
2. Good tasks require some degree of interdependence
3. It is effective when rich verbal interactions occur such as explanation, argumentation, mutual regulation
4. To make it more effective, the script increases the necessity for students to produce these interactions
5. The theory behind emphasizes that cognition is inherently social because thinking mostly relies on language.

Social Cognition

The hardware is individual
but the software is social
