

Lecture 1:

Introduction

Katerina Argyraki, EPFL

● Tesla Model 3 controller

● your washing machine

● heart pacemaker

Google servers

● end-system

● laptop

● smartphone

World of Warcraft
servers

```
while (...) {  
    message = ...;  
    send ( message, ... );  
}
```

● Alice

```
while (...) {  
    message = receive ( ... );  
}
```

Bob ●

Application Programming Interface

Alice

Bob

hello

I want ...

I want ...

I want ...

I want ...

I want ...

I want ...

Questions

- What's underneath?
- Who owns what?
- How does it work?
- How does one evaluate it?
- How do end-systems share it?

Questions

- What's underneath?
- Who owns what?
- How does it work?
- How does one evaluate it?
- How do end-systems share it?

home PC

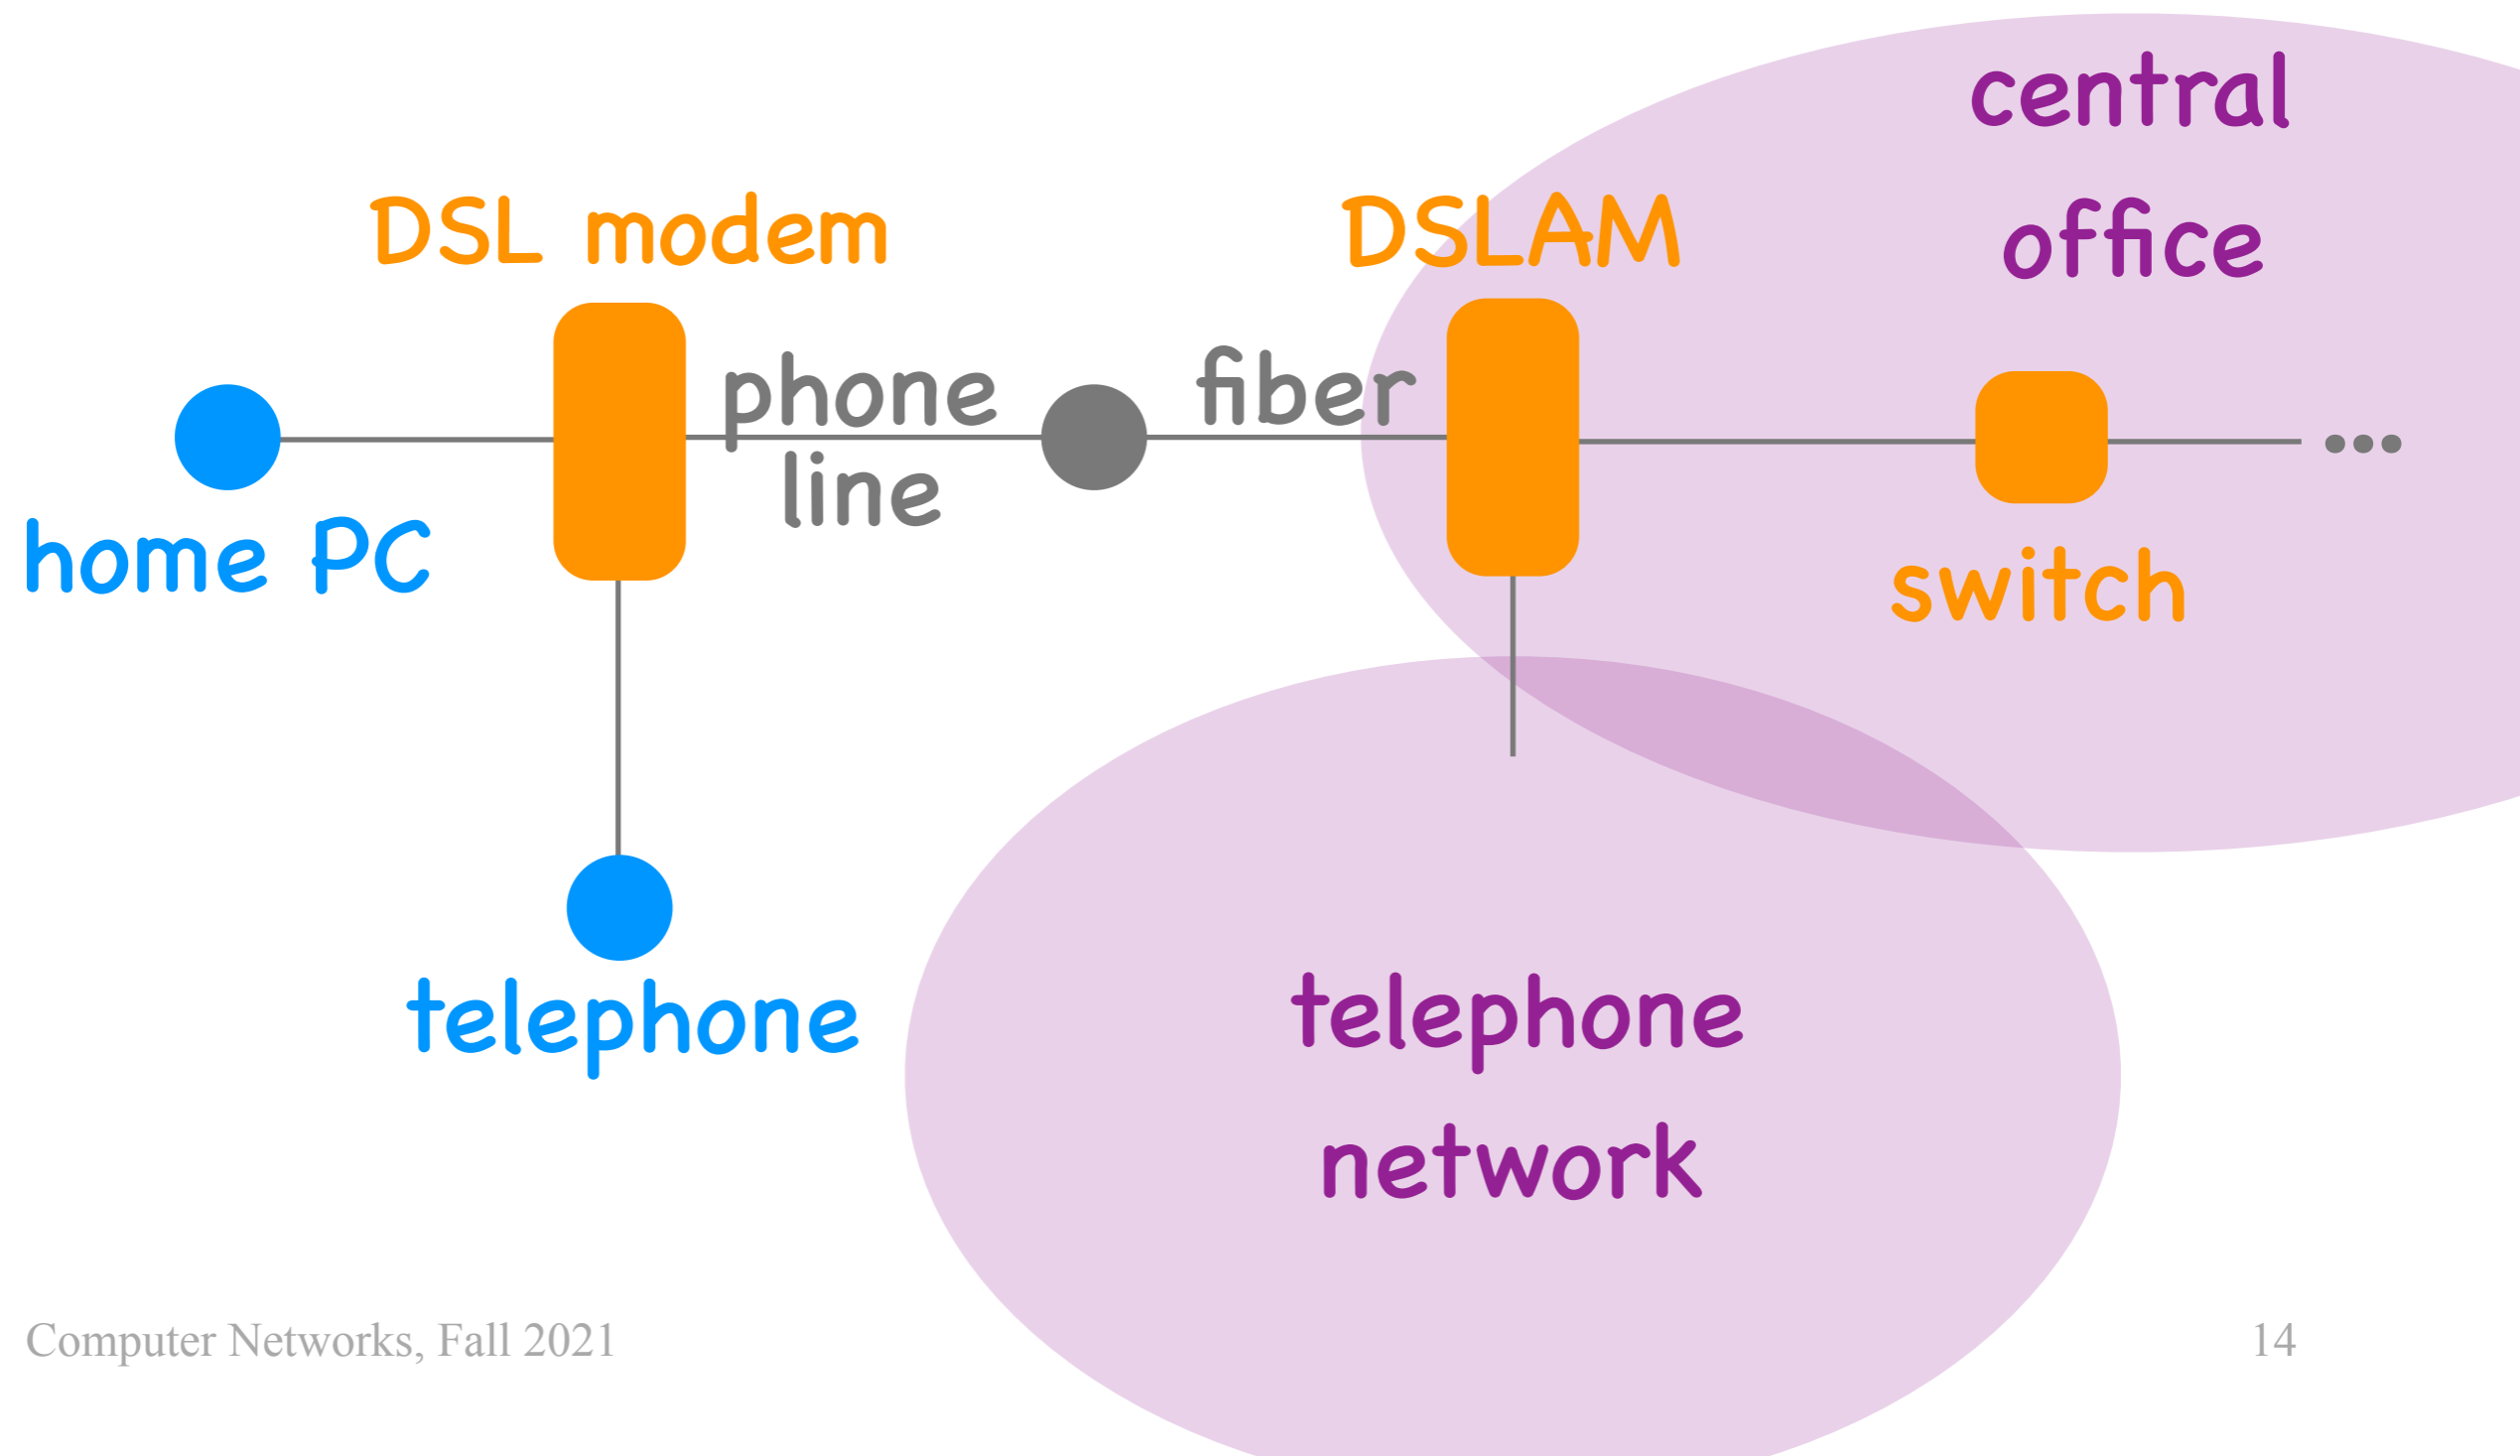

switch

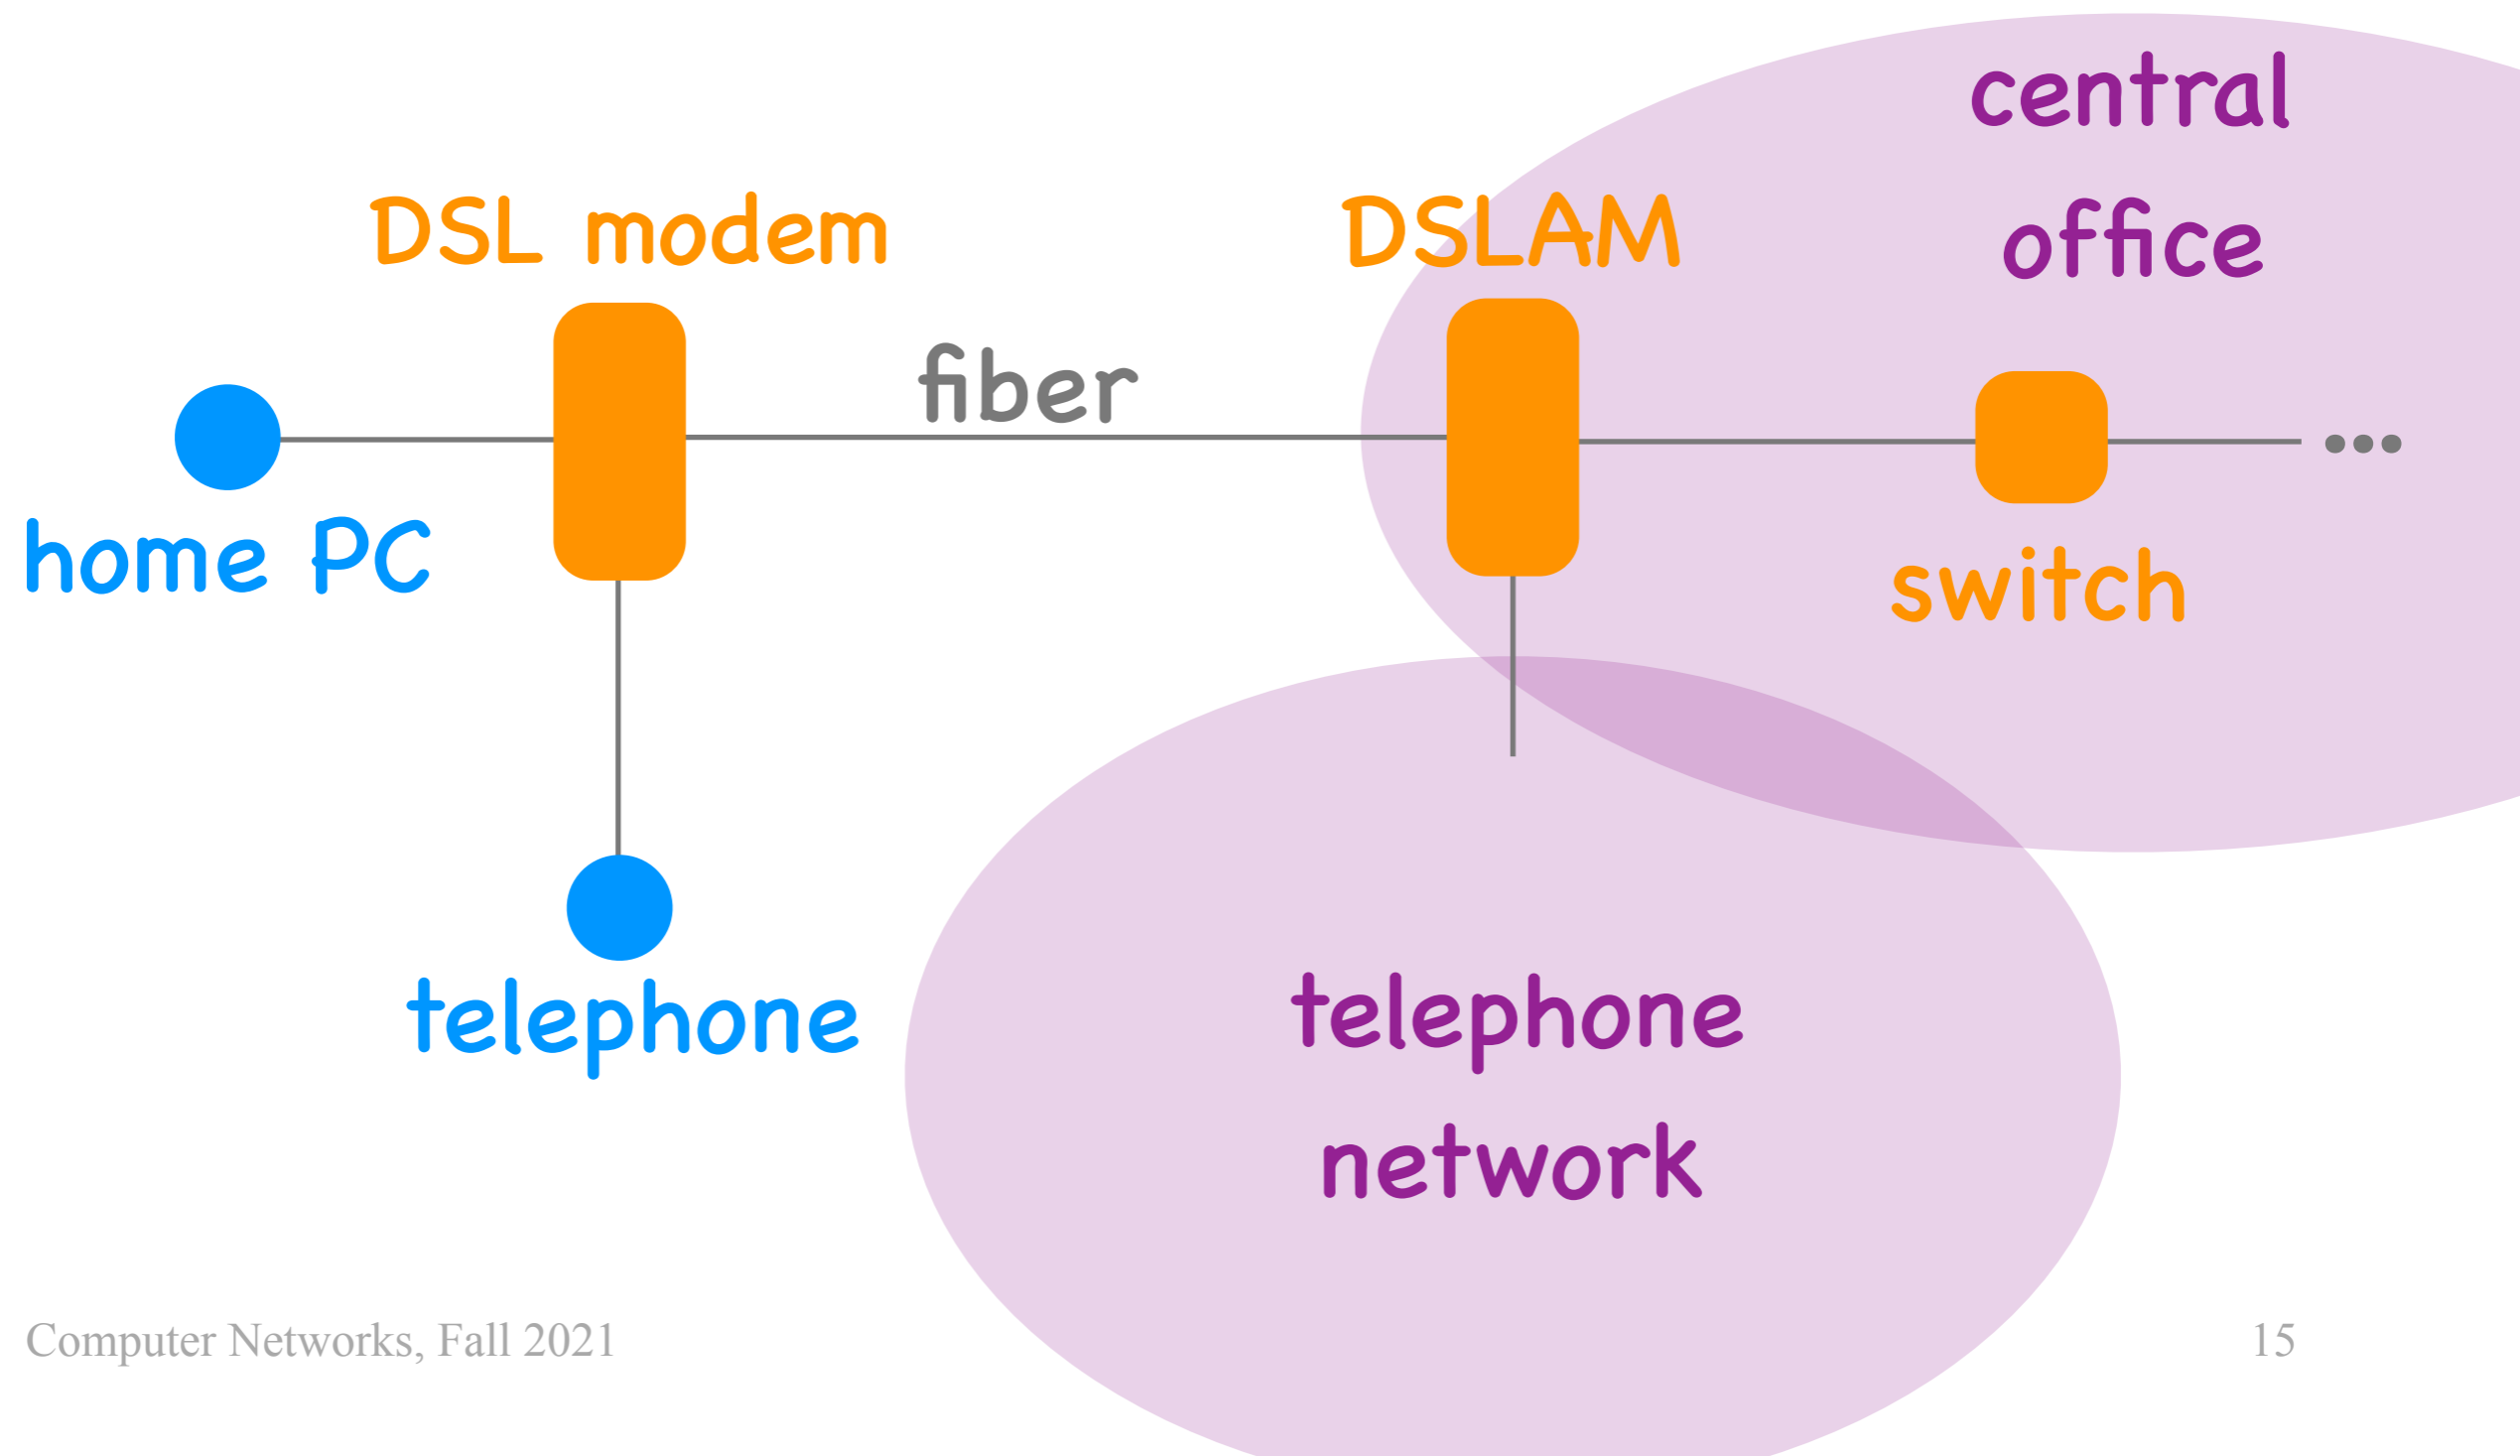

Digital Subscriber Line (DSL)

- DSL modem + phone line (copper)
- 3 channels (downstream data, upstream data, voice)
- typically 10s to 100+ Mbps
 - most allocated to the downstream data channel

Why phone lines?

Fiber to the Home

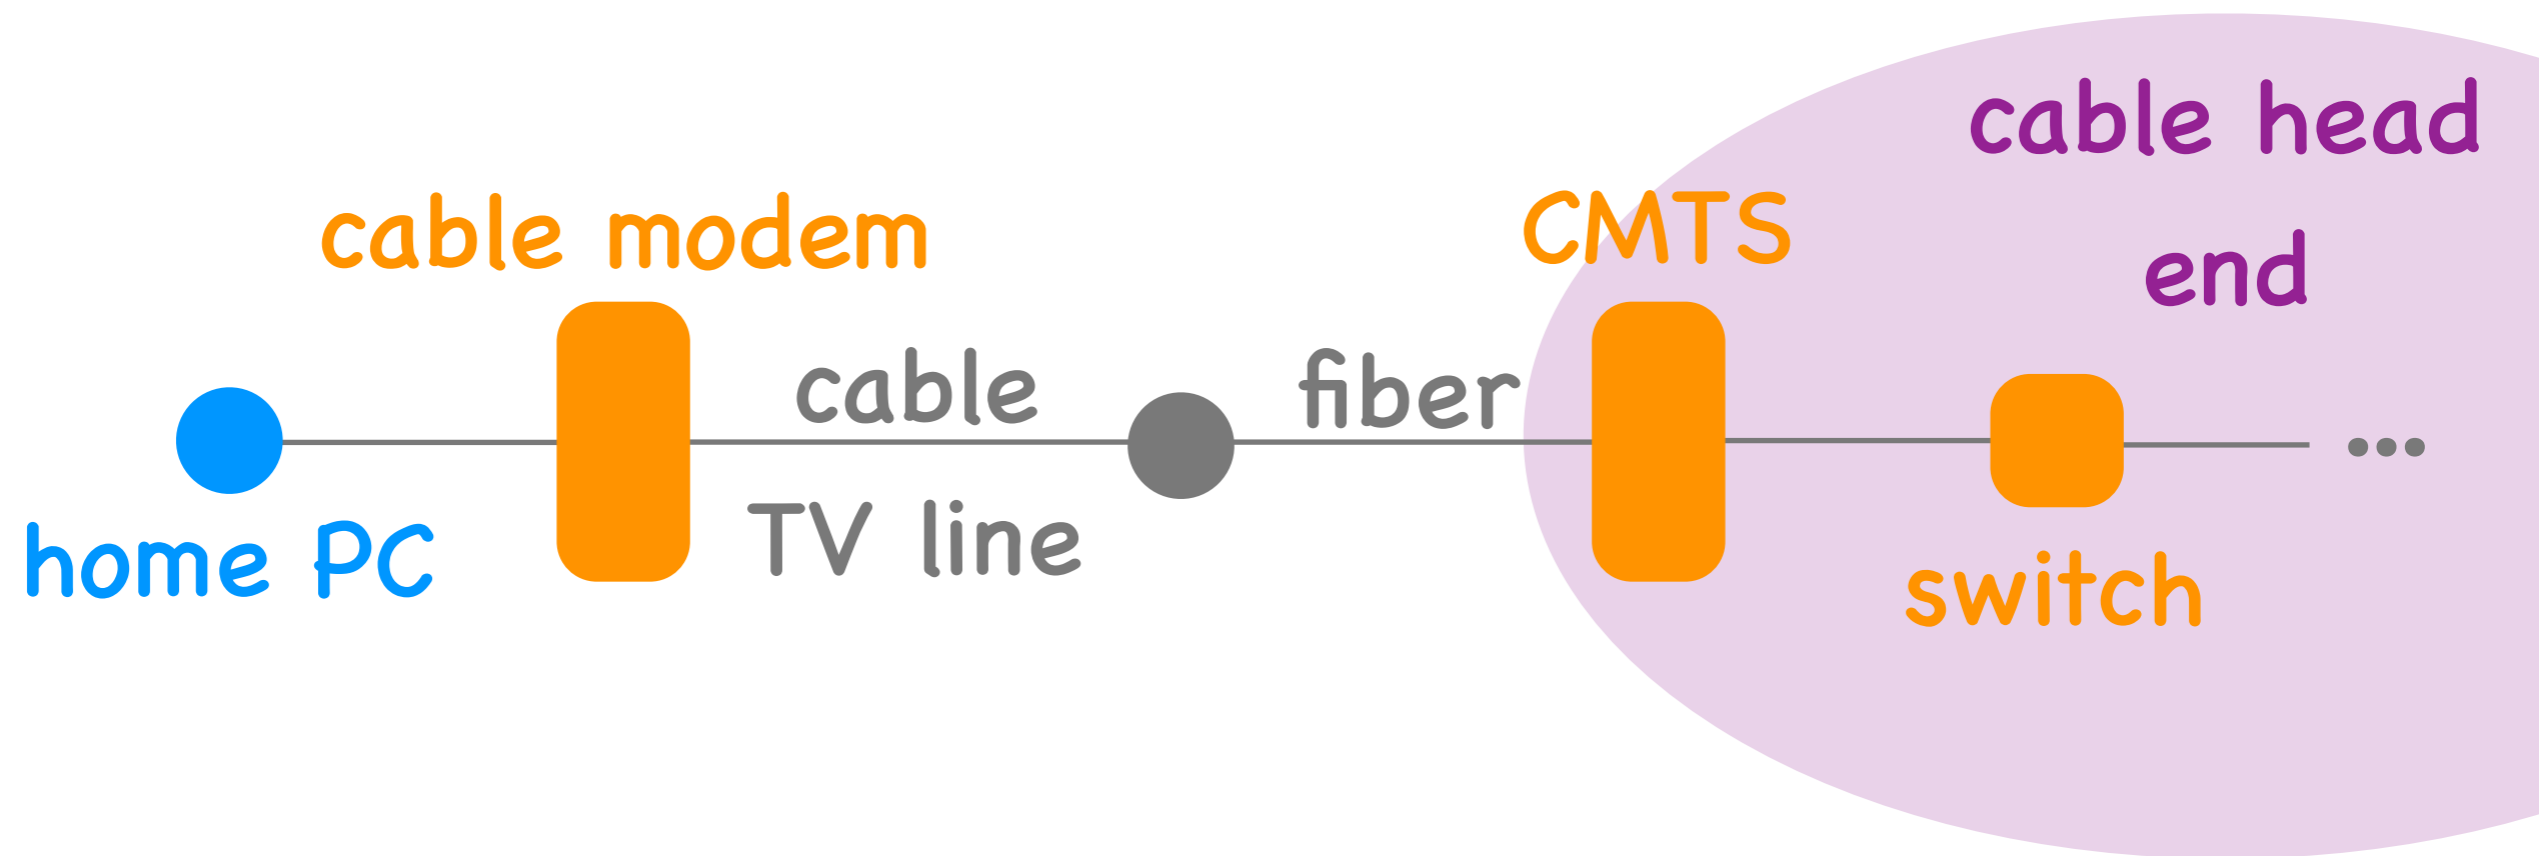

- ...or to the Building/Curb/Street
- modem + fiber (+ copper phone line)
- up to 1 Gbps per direction
(as deployed in Switzerland)

home PC

switch

Cable

- Cable modem + cable line (copper, fiber)
- 2 channels (downstream, upstream)
- typically 100s of Mbps
 - most allocated to the downstream channel
- shared broadcast medium

Ethernet

- Ethernet switches and cables (copper)
- 2 channels (downstream + upstream)
- 1 Gbps, 10 Gbps, 40 Gbps
in each direction

& more

- Cellular (smart phones)
- Satellite (remote areas)
- ...

What physical infrastructure is
already available?

Questions

- What's underneath?
- Who **owns** what?
- How does it work?
- How do we evaluate it?
- How do we share it?

**Internet Service
Provider**

global ISP

access ISP

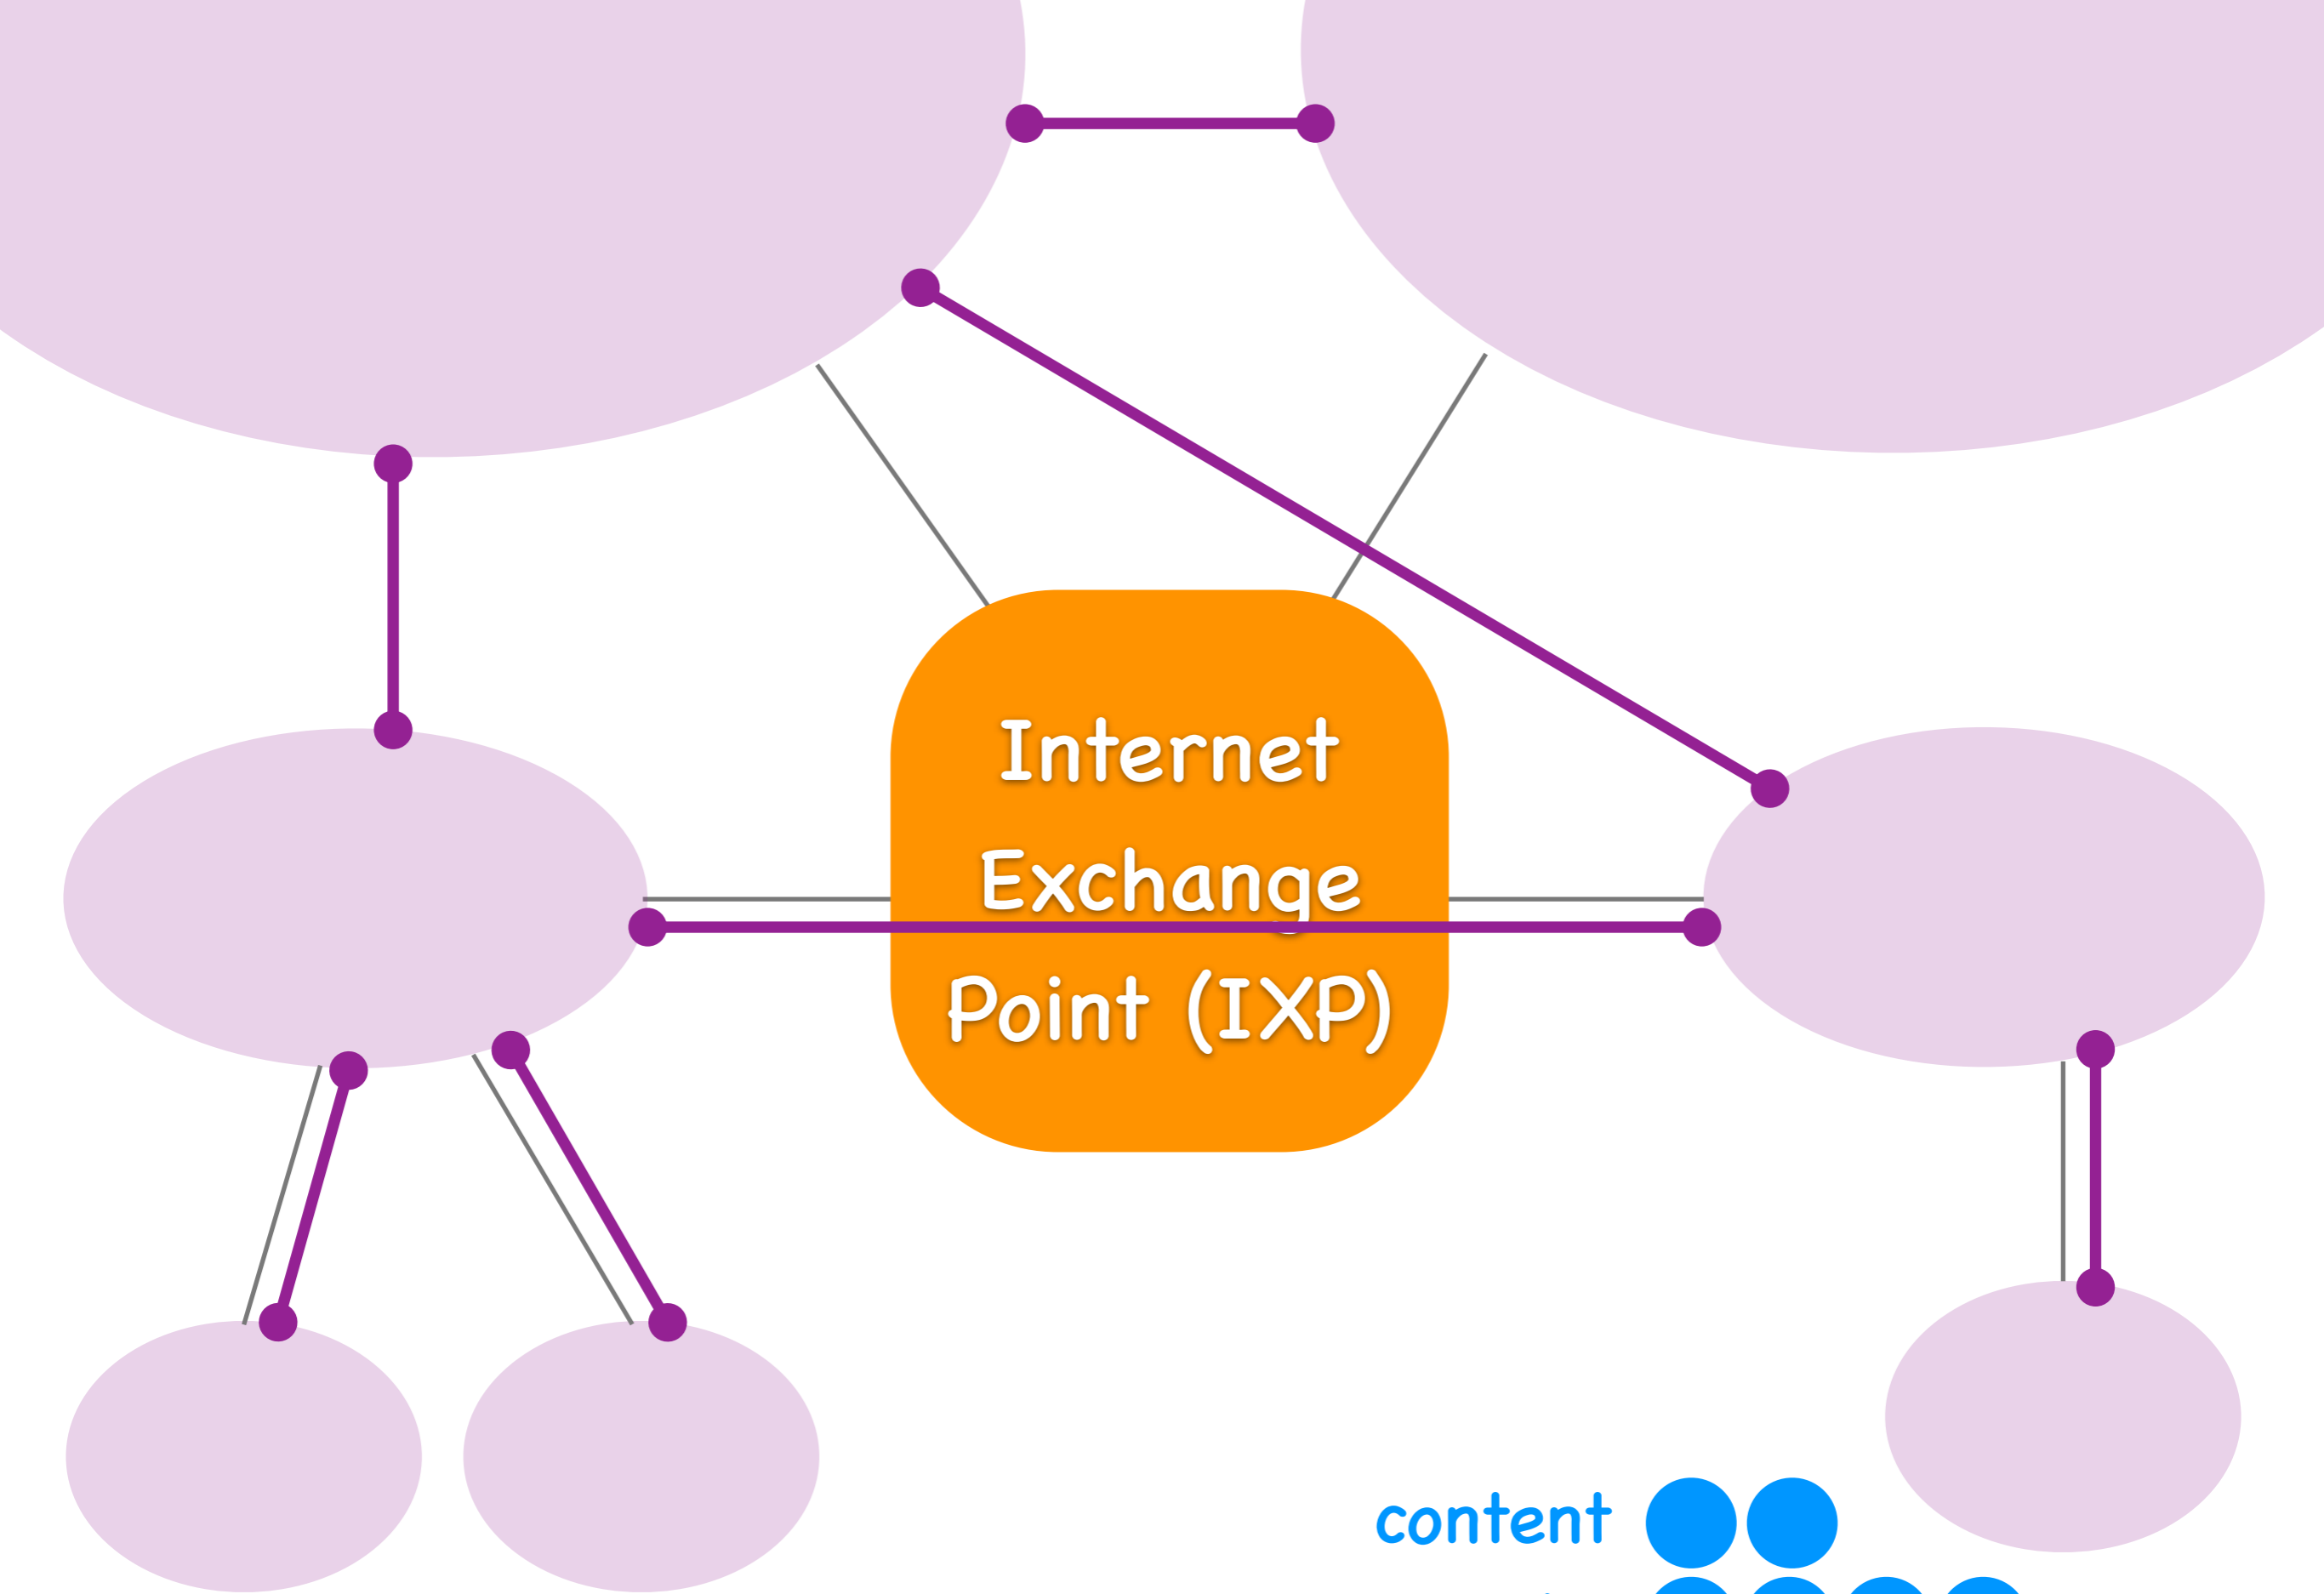

access ISP

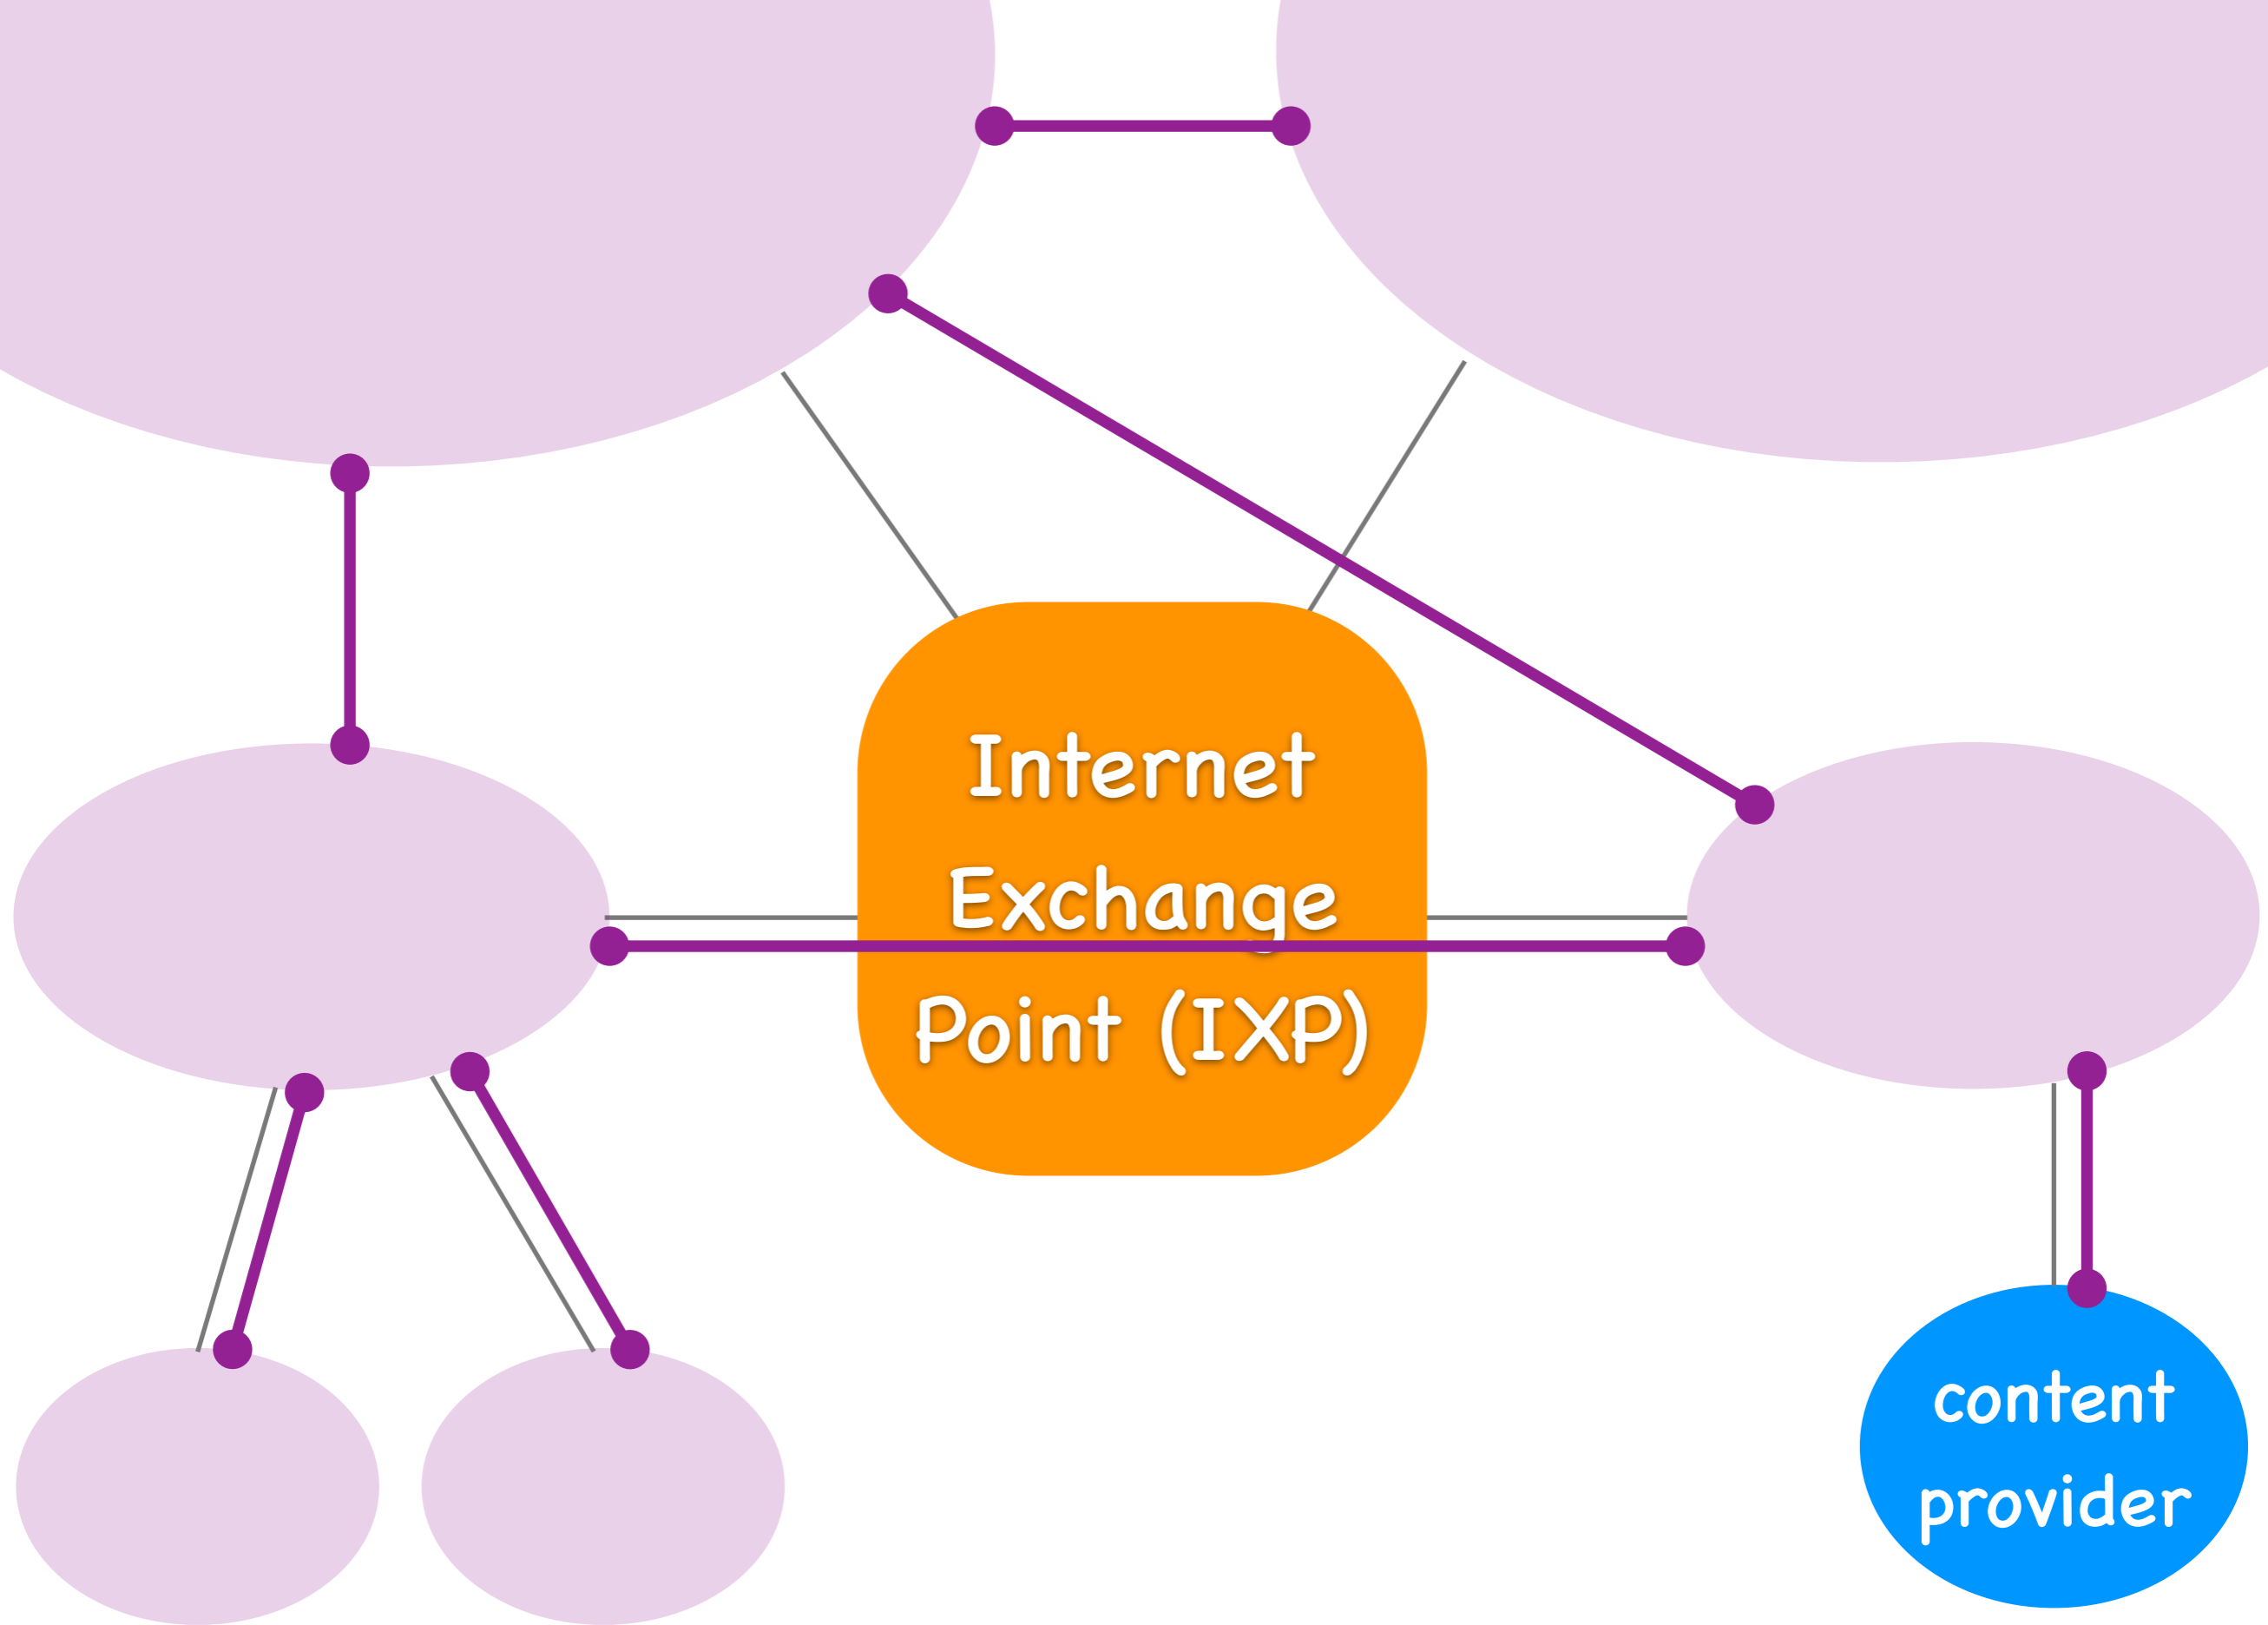

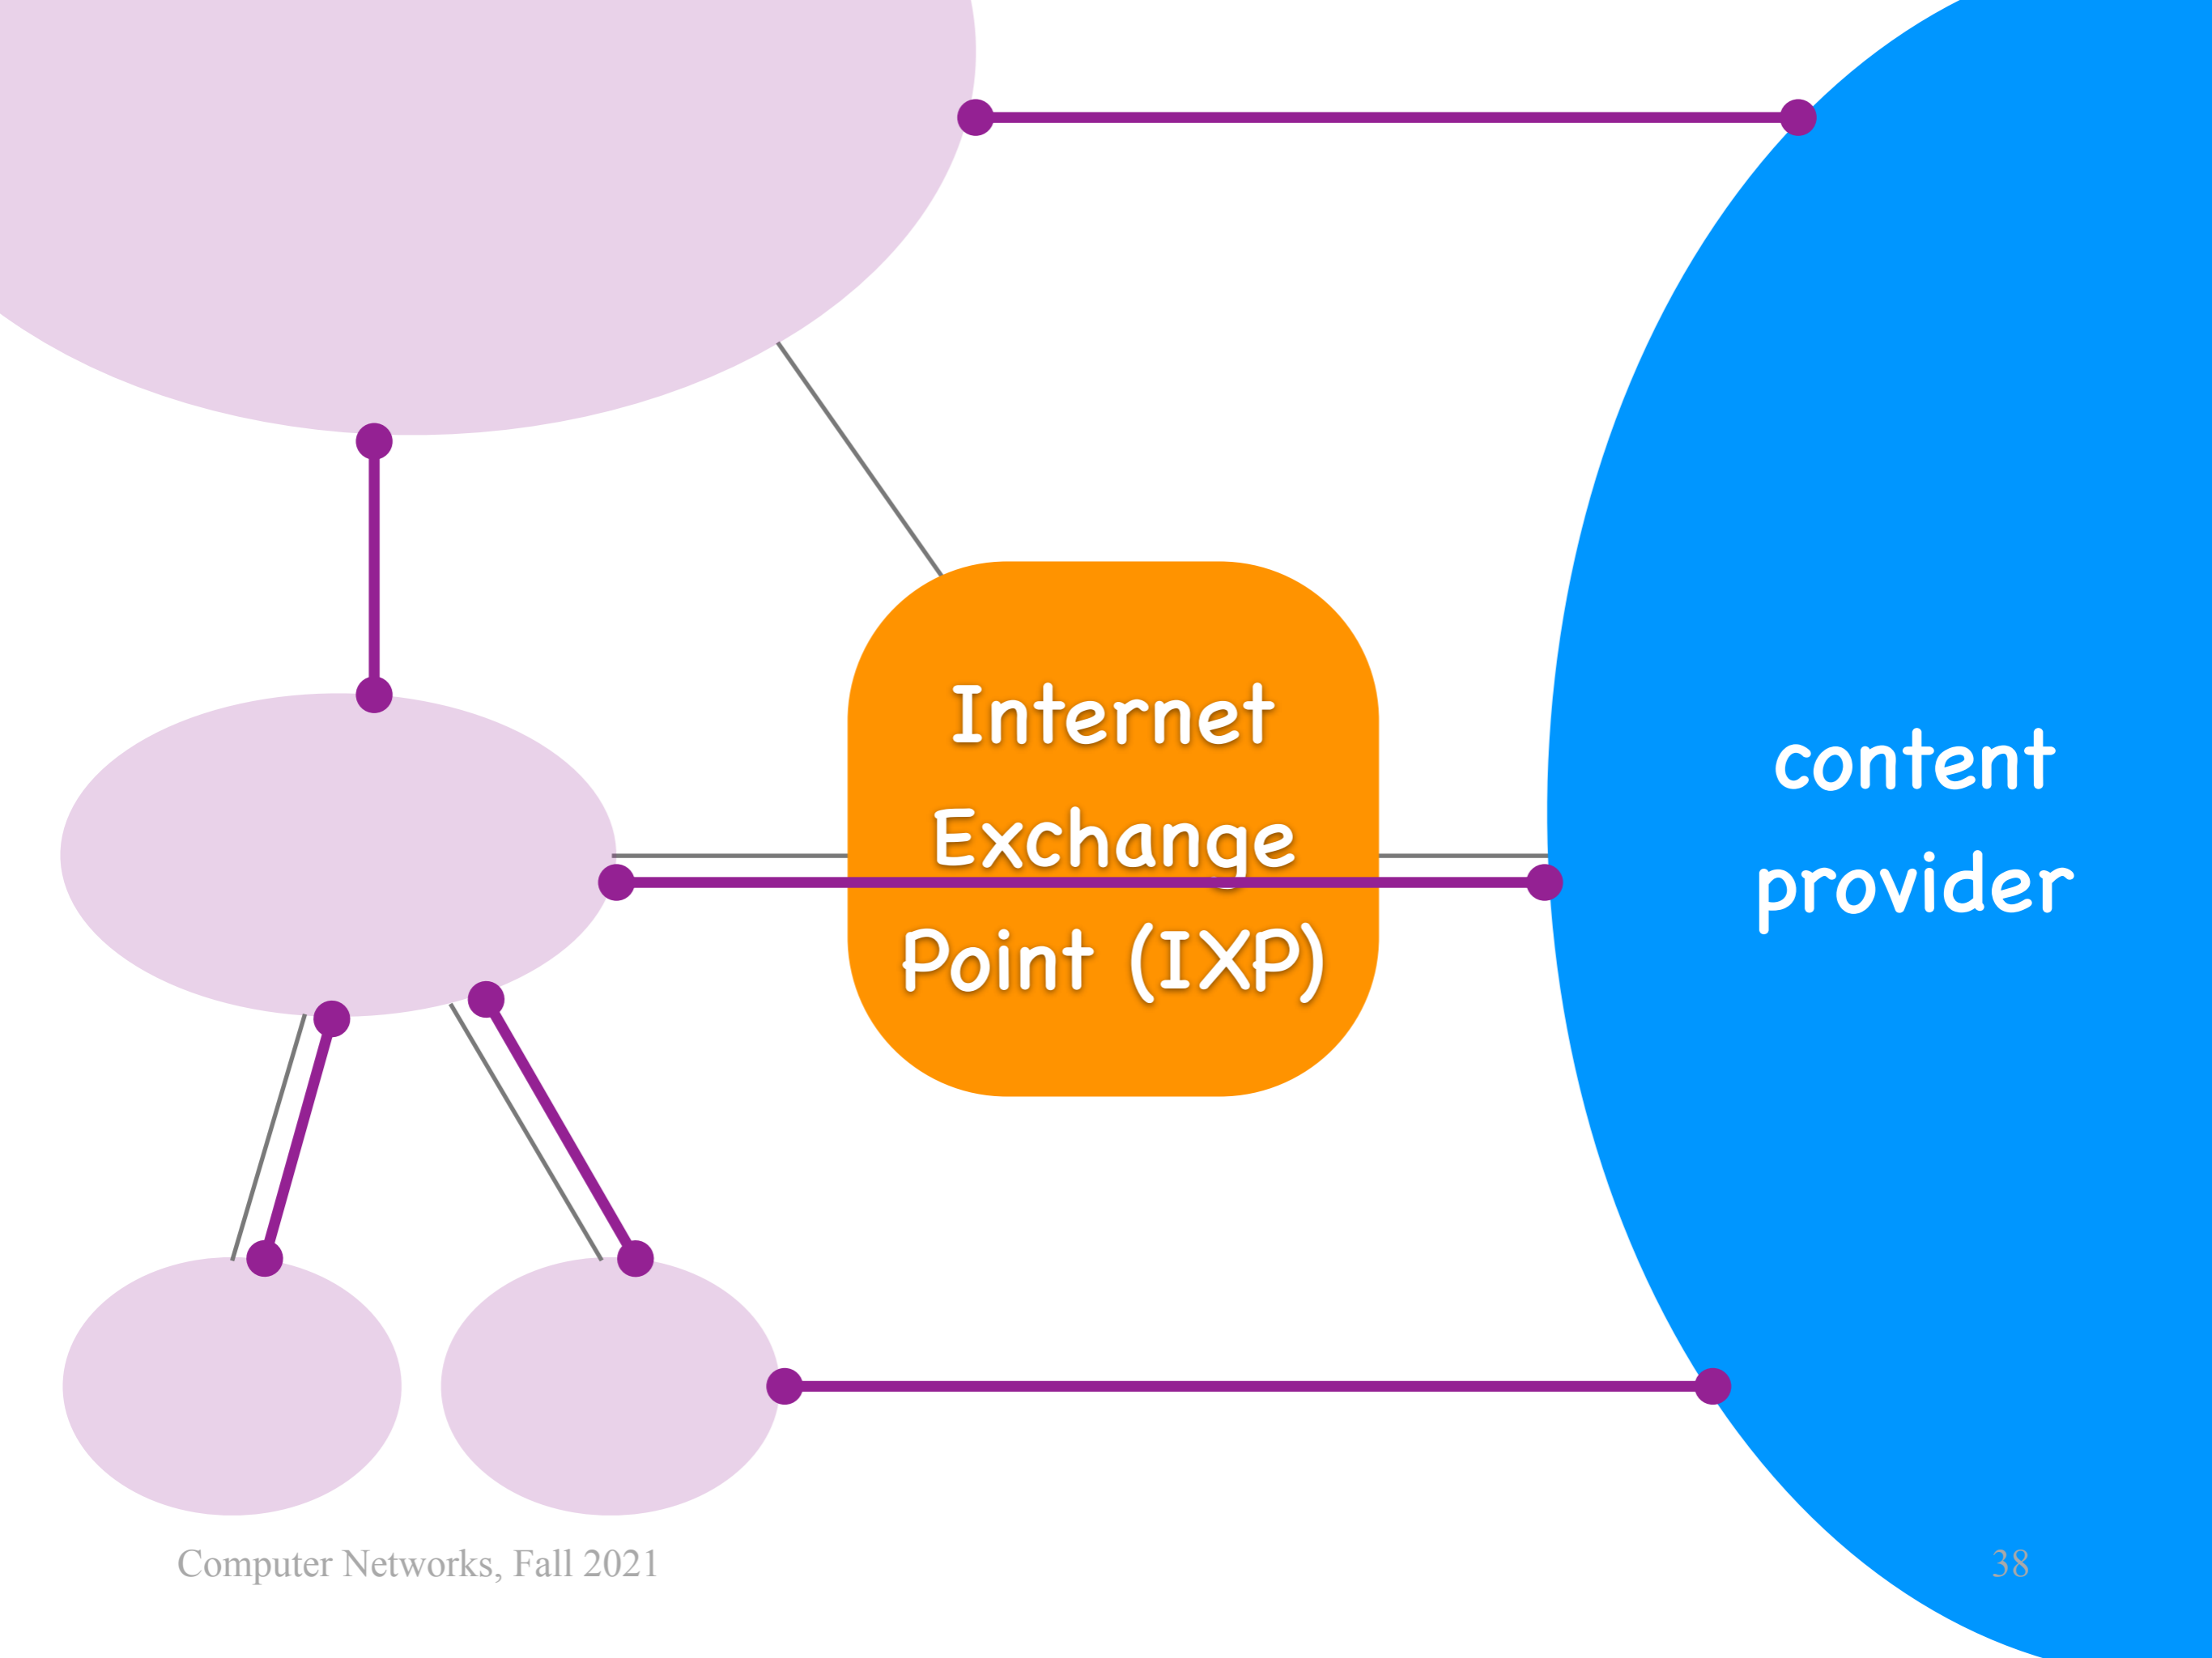

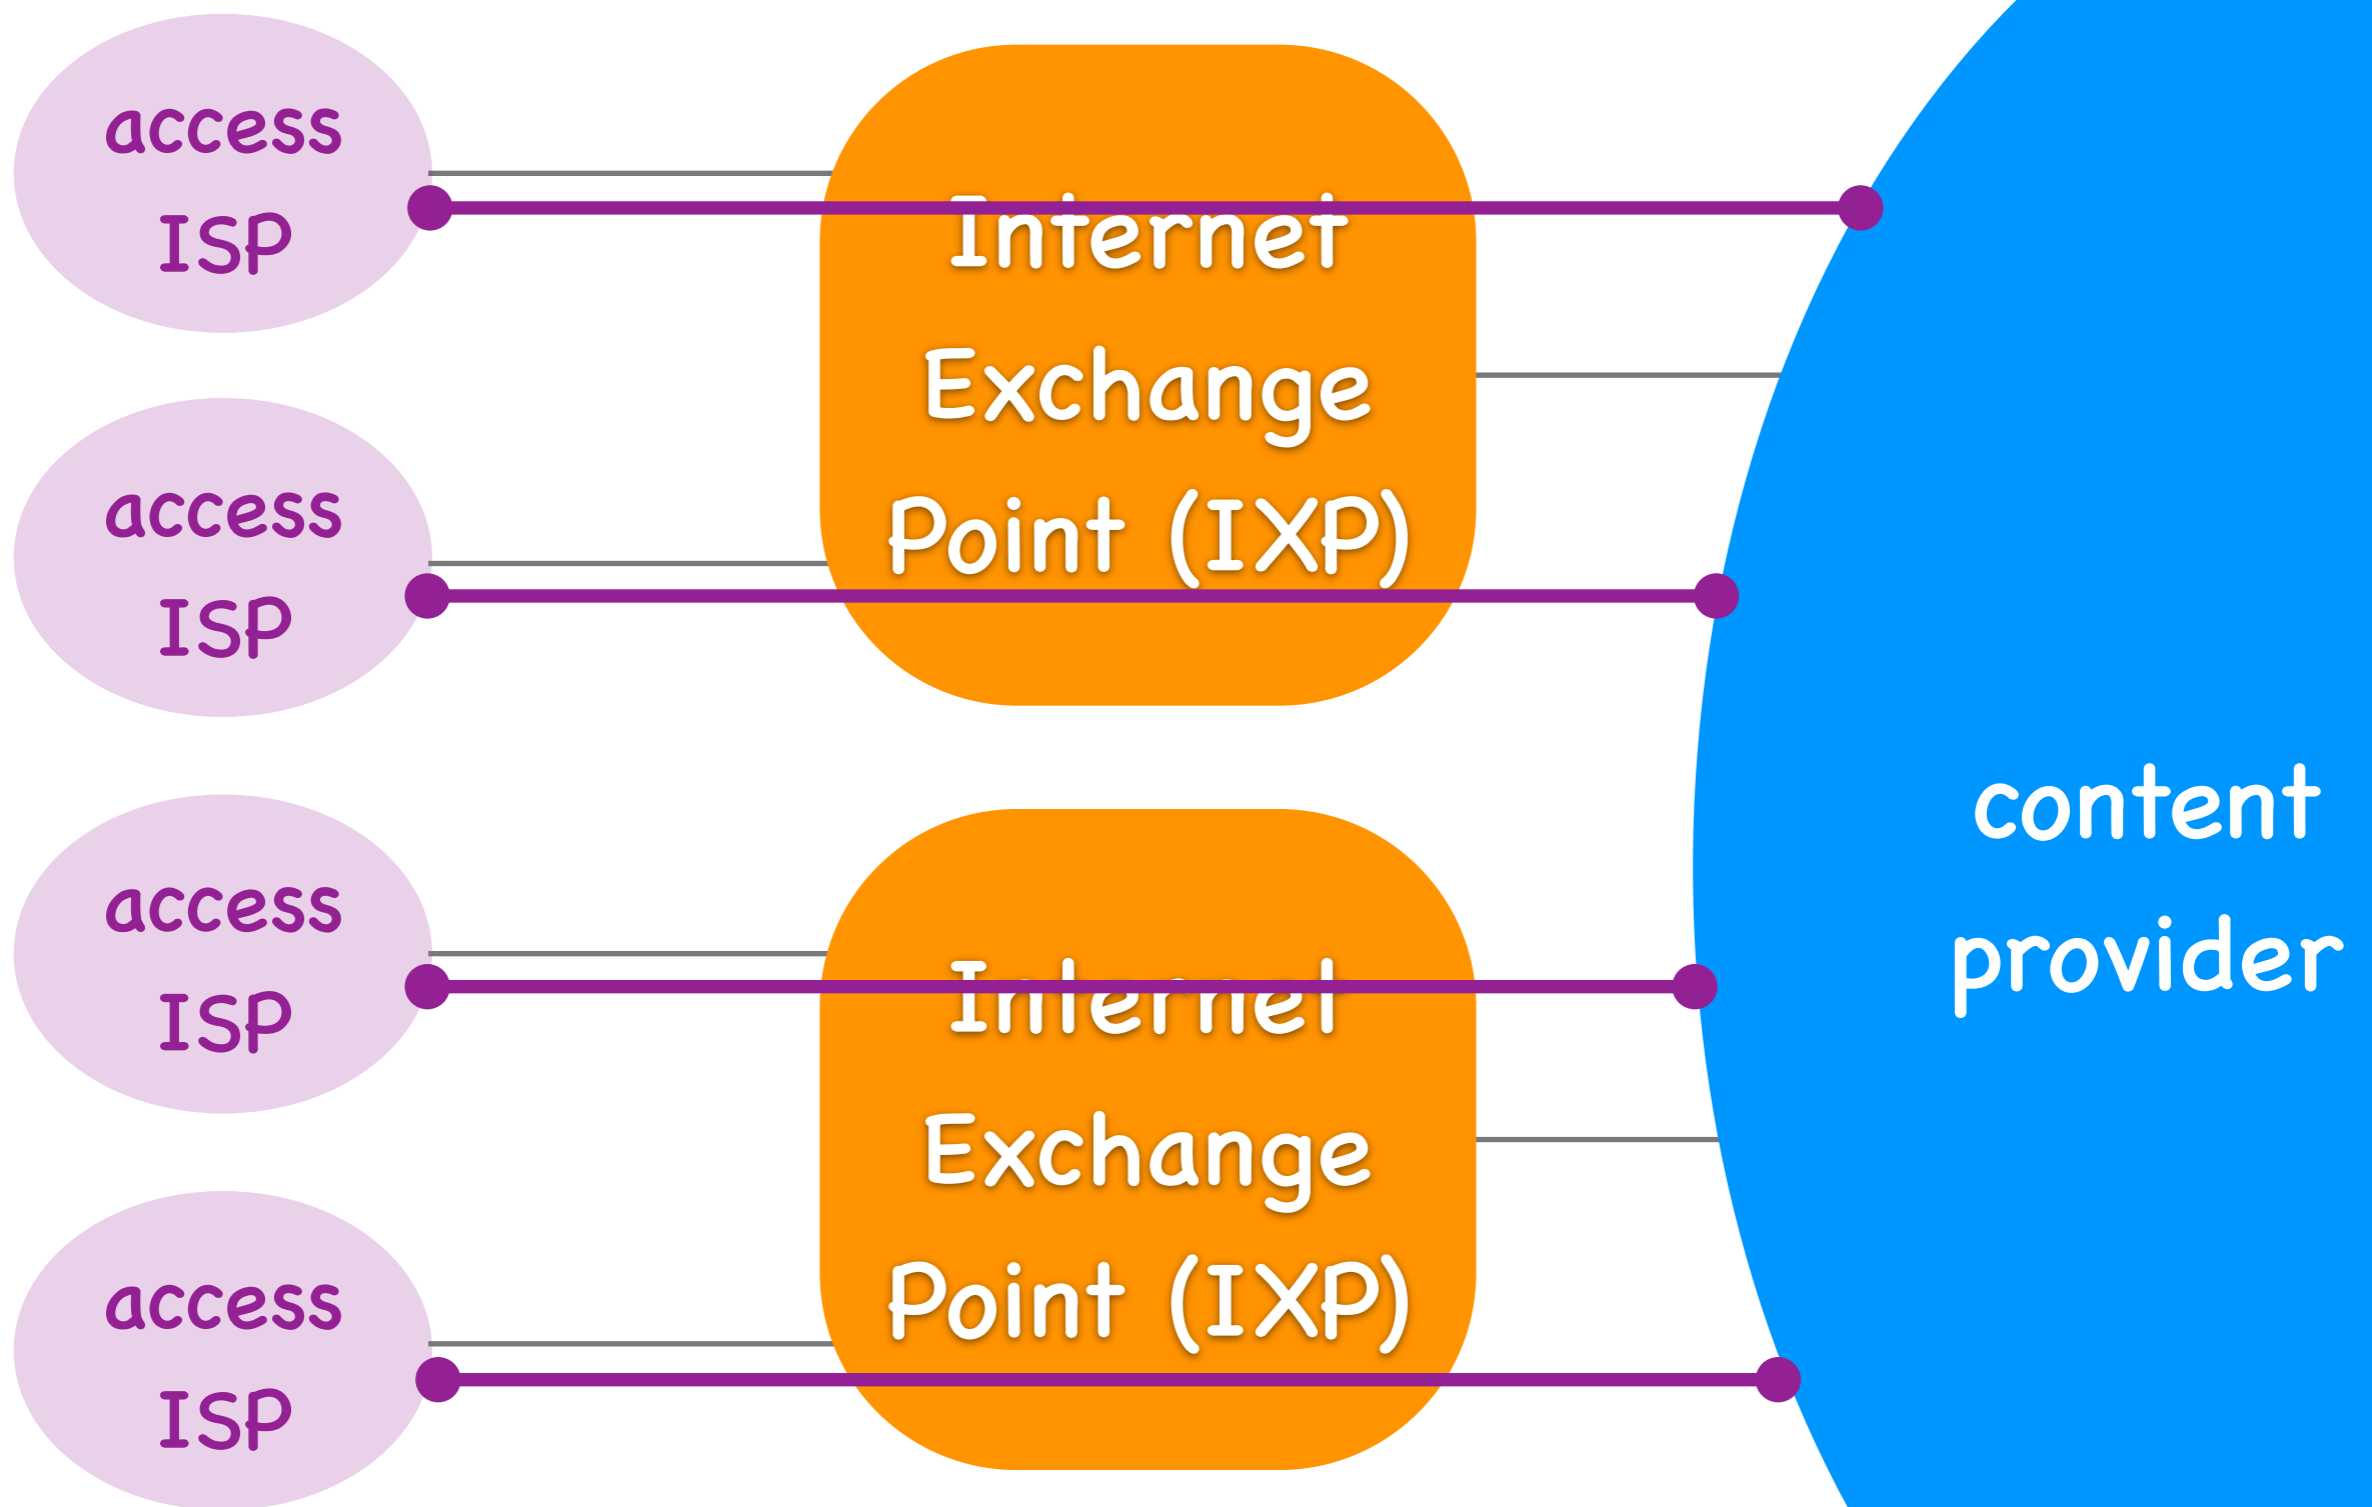

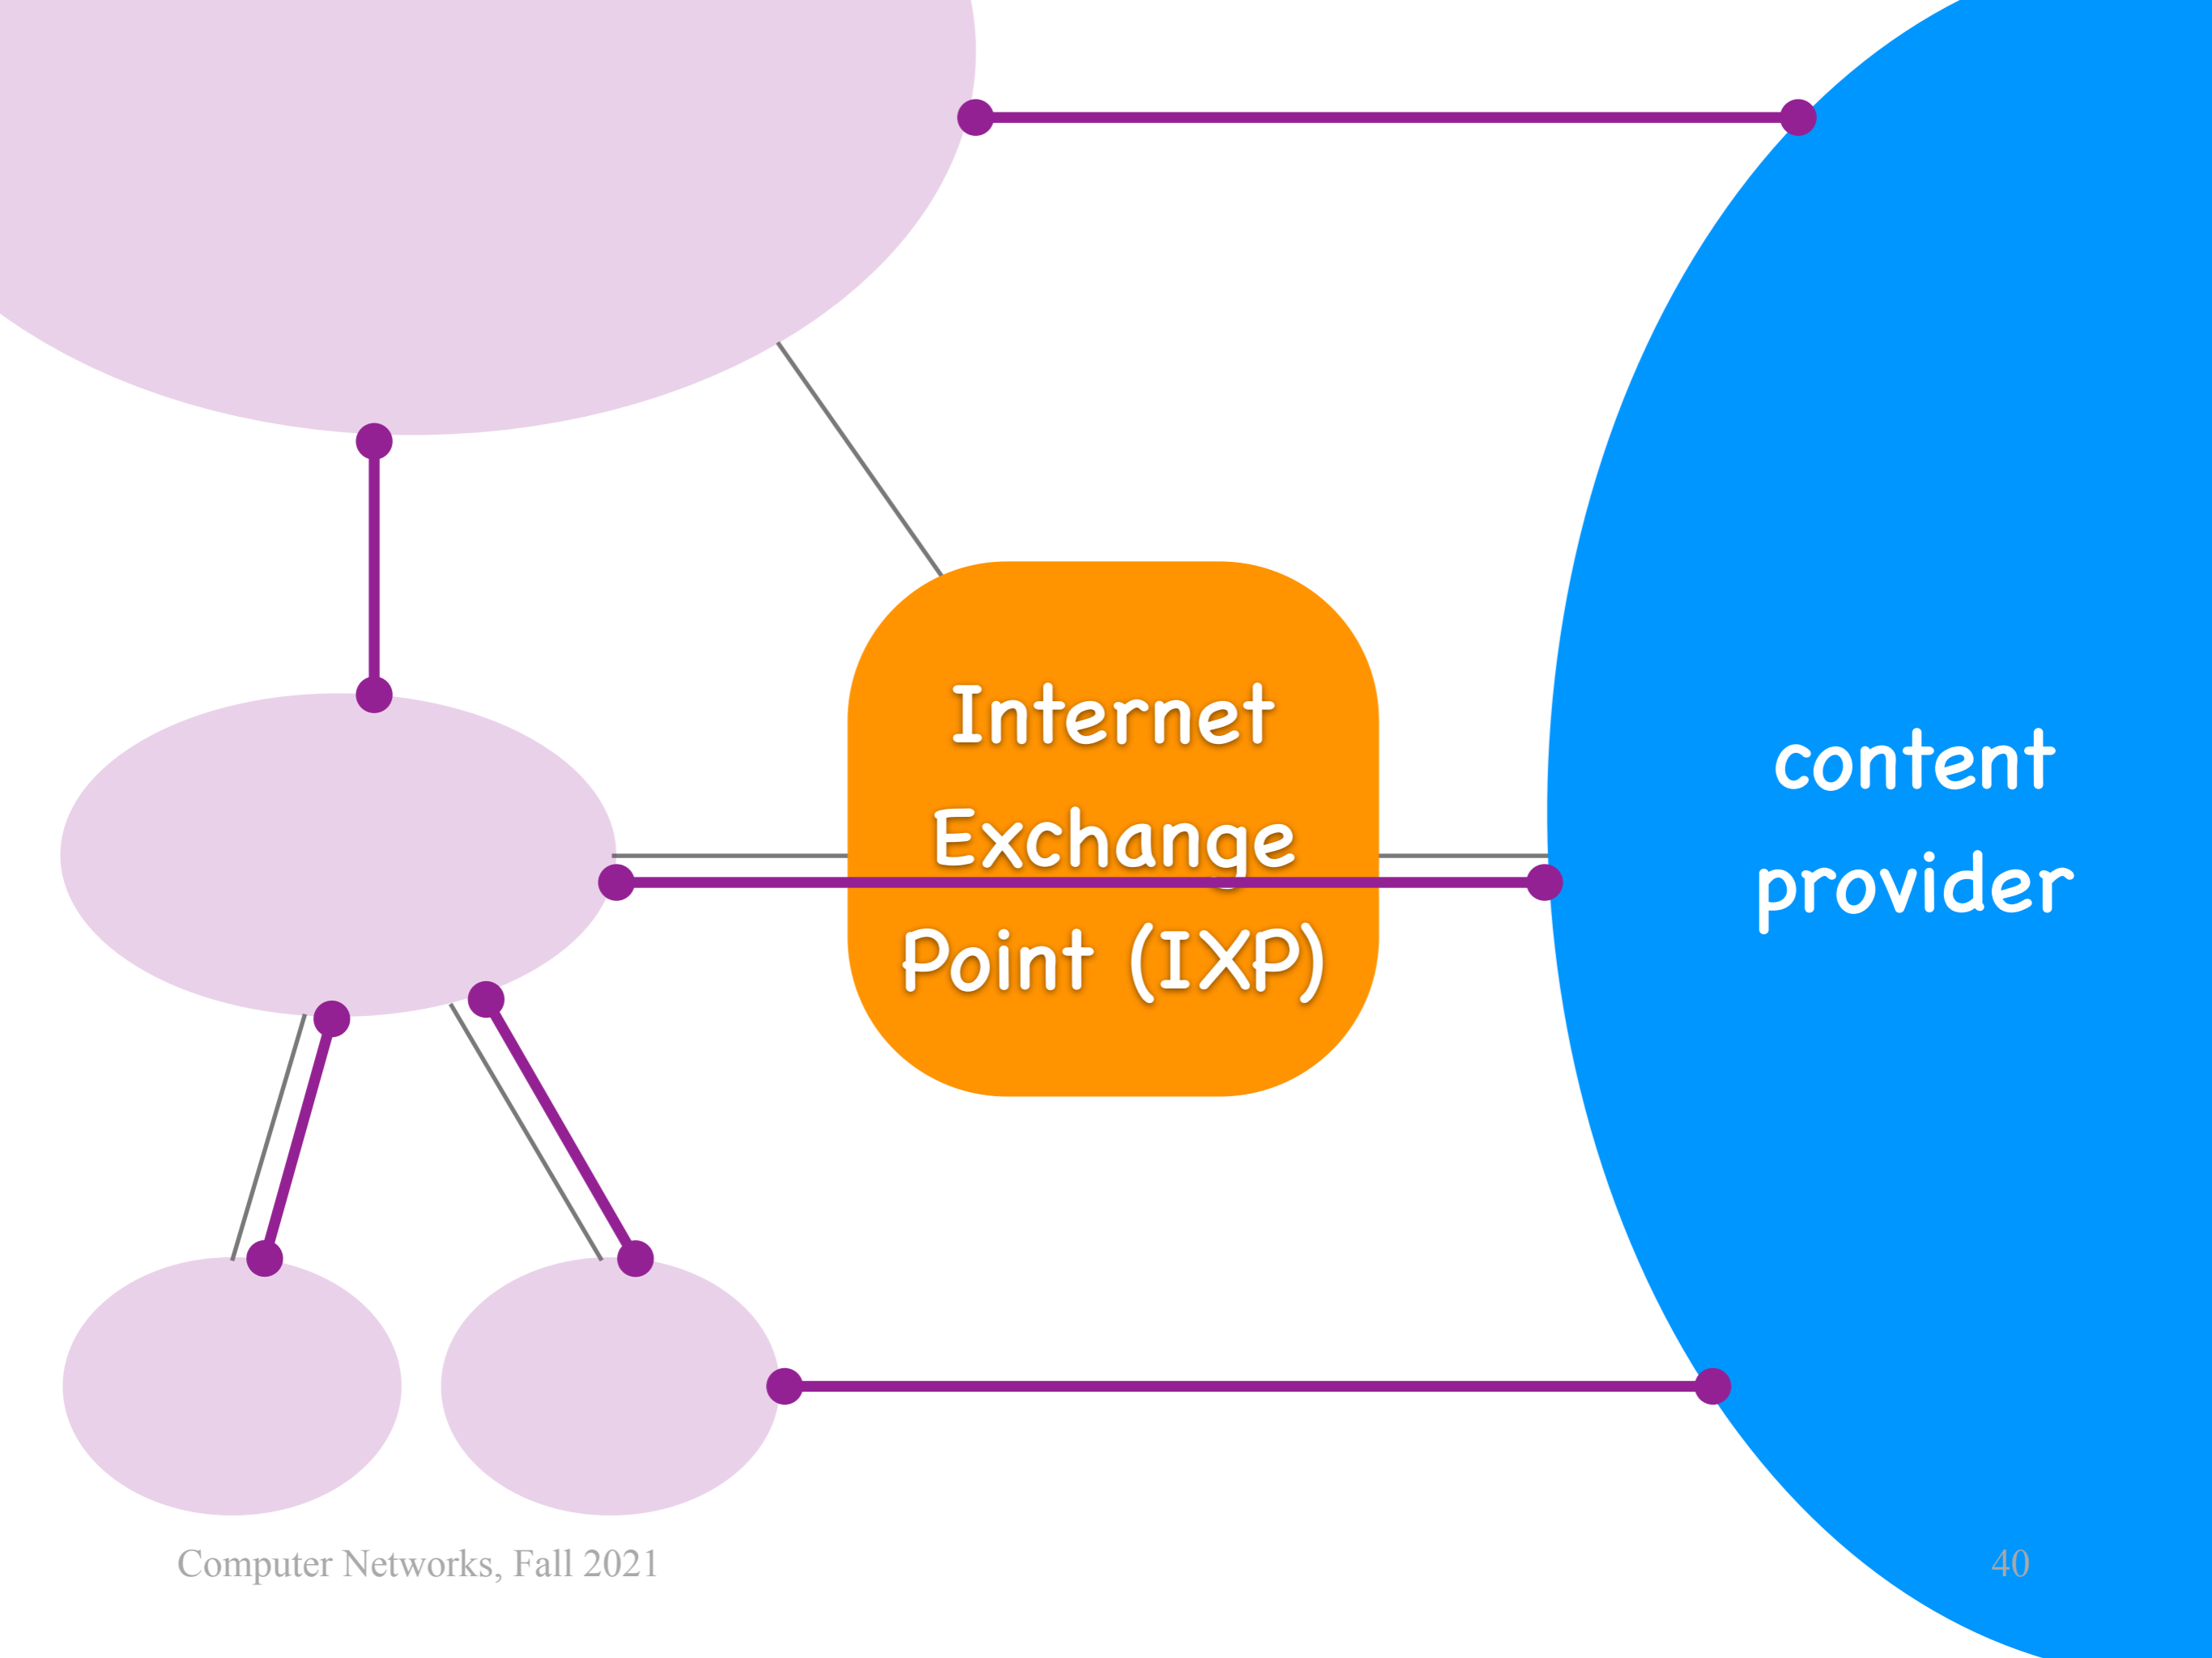

What modularity?

What hierarchy?

Questions

- What's underneath?
- Who owns what?
- How does it **work**?
- How do we evaluate it?
- How do we share it?

Layers

- Layer = a part of a system with **well-defined interfaces** to other parts
- Two layers interact only **through the interface** between them
- One layer interacts only with layer **above** and layer **below**

Alice

moves data between end-systems

network

moves data across the Internet

link

moves data across a link

physical

moves data across a physical medium

```
while (...) {  
    message = ...;  
    send ( message, ... );  
}
```

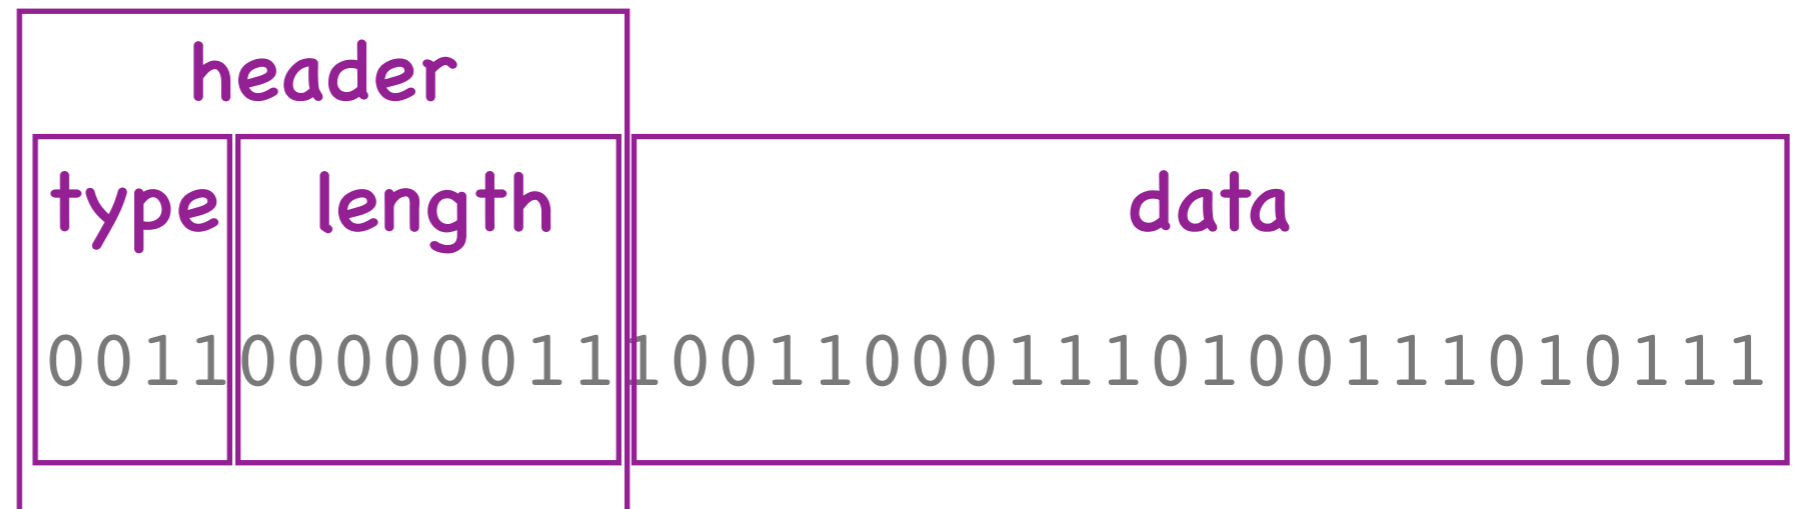

● Alice

```
while (...) {  
    message = receive ( ... );  
}
```

Bob ●

```
while (...) {  
    message = ...;  
    send ( message, ... );  
}
```

● Alice

Message format:

agreement on what each bit means

Bob's computer

Layers

- Each layer touches only the header **of the same layer**
- May add a new header
= **encapsulation**
- May remove the header
= **decapsulation**

Names (Identifiers)

- For network interfaces:
DNS names, IP addresses,
MAC addresses, local names
- For processes:
network-interface name
+ port number

Translate DNS names to IP addresses:

```
> host www.epfl.ch
```

DNS names

```
www.epfl.ch is an alias for  
www.epfl.ch.cdn.cloudflare.net
```

```
www.epfl.ch.cdn.cloudflare.net  
has address 104.20.229.42
```

```
www.epfl.ch.cdn.cloudflare.net  
has address 104.20.228.42
```

IP addresses

Find out the *MAC* and *IP* address of the network interface(s) on your computer:

```
> ifconfig
```

```
en0:
```

```
ether 5c:f9:38:a4:00:76
```

```
inet 128.168.178.27
```

MAC address

IP address

Check whom you are communicating with:

```
> netstat
```

```
Local Address
```

```
goldfish.fritz.b.60242
```

```
goldfish.fritz.b.59740
```

DNS names

port numbers

```
Foreign Address
```

```
ewa.epfl.ch.https
```

```
108.177.119.188.5228
```

IP address

Discover packet switches between your computer and a remote one:

```
> traceroute www.epfl.ch
```

```
1 fritz.box (192.168.178.1) ...  
2 10.136.43.239 (10.136.43.239) ...  
3 as13335.swissix.ch (91.206.52.192) ...
```

DNS names

IP addresses

Look inside network packets:

header source + dst MAC addresses

header source + dst IP addresses

header source + dst port numbers

header | data application stuff

Why layers?

What layers to define?

Course rythme

- **Friday: material becomes available**
 - slides in Keynote and PDF
 - lab + homework problems
 - on Moodle
- **Friday, 15h00–17h00: lecture**
 - SG1138 + online on Zoom

Course rythme

- Tuesday, 12h00–14h00: office hours
 - focus on homework
 - online on Zoom
- Wednesday, 15h00–17h00: lab/hw session
 - INF2/INF3 + online on Discord
 - on your own computer or EPFL infrastructure

Quizzes

- Voluntary, count only if you do well
- 10min, every other week
- Cover the 2 previous lectures
- Online on Moodle

Midterm

- Voluntary, counts only if you do well
- Exact format TBD
- Covers all lectures, homework, and labs prior to midterm date
- Online on Moodle + Discord

Final

- **Mandatory, counts always**
- **2 hours, closed-book, date + room TBD**
- **Covers all lectures, homework, and labs**
- **During winter exam session**

Grade

- quiz grade =
average of 3 best quizzes
- exam grade =
 $\max \{ \text{final}, 0.7\text{final} + 0.3\text{mid} \}$
- overall course grade =
 $\max \{ \text{exam}, 0.9\text{exam} + 0.1\text{quiz} \}$

On Moodle

- Lecture slides & pre-recorded videos
- Lab & homework problems, solutions
- Announcements (News forum)
- Q&A (Discussion forum)
- Course logistics (e.g., where to login to do the labs remotely)

Communication

- **Discord space**
 - informal, fast, knowledge sharing
- **Moodle discussion forum**
 - for longer interactions, still fast
- **com208-staff@groupe.epfl.ch**
 - for questions you don't want to share

Welcome aboard!
