# Principles of Computer Systems
# Final Exam

13-Dec-2022

This exam has three questions, totaling 100 points. You have 105 minutes to answer them. If you find yourself spending on any given question more minutes than the number of points attributed to it, you might consider moving on to the next question.

The exam takes place in room BC 01, and you must be physically present to take it. The exam statement will be available on Moodle starting at 11:15 CET on 13-Dec-2022. For your answers to be graded, they must be turned in via Moodle no later than 13:00 CET. Feel free to submit intermediate stages of your work, in case something goes wrong toward the end of the exam. We will only grade your final submission.

Exam rules:

- Use your personal computing equipment to do the work and submit your answers.

- You can consult your own personal notes, the lecture slides, and the assigned papers that are stored locally on your laptop, or that you brought along in printed paper form. No additional screens are permitted.

- You are not permitted to access or interact with any resource over the network other than Moodle. Please make sure to turn off all chat applications, mail, etc. to avoid accidental network activity.

- You are not permitted to interact with or receive or give any assistance for the exam except with/from the course staff.

- You are not permitted to wear headphones of any kind.

- You may submit your solution multiple times any time before the deadline, and you can go back and modify a submission before the deadline.

- Any violation of the above rules will be considered cheating and will be prosecuted to the full extent of the EPFL rules on the matter.

Read each question carefully. You need to provide a correct answer to the *correct* question in order to receive full credit. A correct answer to a *wrong or misinterpreted* question will not earn credit. If you have any doubts, raise your hand, and the course staff will come help.
